Question 1 (60 Points)

Score.....

Consider the individual's portfolio choice problem given in the below equation:

$$(W_0 - A)(1 + r_f) + A(1 + \tilde{r})$$

$$\max_A E[U(\tilde{W})] = \max_A E[U(W_0(1 + r_f) + A(\tilde{r} - r_f))]$$

Assume the utility of this investor: $U(W) = \ln(W)$ and the rate of return on the risky asset equals

$$\tilde{r} = \begin{cases} 4r_f & \text{with probability } \frac{1}{2} \\ -r_f & \text{with probability } \frac{1}{2} \end{cases}$$

Solve for the individual's proportion of initial wealth invested in the risky asset, $(\frac{A}{W_0})$.

$$\text{FOC : } E[U'(\tilde{W})(\tilde{r} - r_f)] = 0$$

$$\frac{1}{2} U'(W^h)(r^h - r_f) + \frac{1}{2} U'(W^l)(r^l - r_f) = 0$$

$$\frac{1}{2} \left[\frac{1}{W_0(1+r_f) + A(4r_f - r_f)} \right] (4r_f - r_f) + \frac{1}{2} \left[\frac{1}{W_0(1+r_f) + A(-r_f - r_f)} \right] (-r_f - r_f)$$

$$\left(\frac{\frac{3}{2} \left[\frac{r_f}{W_0(1+r_f) + 3r_f A} \right]}{\right) - \left(\frac{r_f}{W_0(1+r_f) - 2r_f A} \right) = 0$$

$$3(W_0(1+r_f) - 2r_f A) = 2(W_0(1+r_f) + 3r_f A)$$

$$3(W_0 + W_0 r_f - 2r_f A) = 2(W_0 + W_0 r_f + 3r_f A)$$

$$3W_0 + 3W_0 r_f - 6r_f A = 2W_0 + 2W_0 r_f + 6r_f A$$

$$W_0 + W_0 r_f = 12r_f A$$

$$\frac{A^*}{W_0} = \frac{(1+r_f)}{12r_f}$$

A large, empty rectangular box with a thin black border, occupying the central portion of the page. It is intended for the student to provide answers or show work for the assignment.

Score.....

$$U(W) = \frac{W^\gamma}{\gamma}$$
$$\gamma = -1 \quad ; \quad u(w) = -\frac{1}{w}$$

$$X \begin{cases} w-L & p \\ w & 1-p \end{cases} \quad E(u(x)) = p\left(-\frac{1}{w-L}\right) + (1-p)\left(-\frac{1}{w}\right)$$

$$\begin{aligned} \text{purchase} & \quad \text{hot} \\ u(w-c) &= E[u(x)] \\ -\frac{1}{w-c} &= \frac{p-1}{w} - \frac{p}{w-1} \end{aligned}$$

$$\frac{p}{w-L} - \frac{p-1}{w} = \frac{1}{w-C}$$

$$\frac{pW - (p-1)(W-L)}{W(W-L)} = \frac{1}{W-C}$$

$$W-C = \frac{W(W-L)}{PW - (p-1)(W-L)}$$

$$(W-C)(P_W - P_W + P_L + W - L) = W(W-L)$$

$$(w-c)(p_L + w - L) = w^2 - wL$$

$$(w-c)(pL + w - L) = w^2 - wL$$

$$WPL + \cancel{W^2} - \cancel{WL} - CPL - WC + CL = \cancel{W^2} - \cancel{WL}$$

$$W = \frac{CPL - CL}{(PL - C)} \quad \#$$

Question 3 (60 Points)

Score.....

Risk Aversion: Consider the following utility functions (Defined over wealth:W)

- (1) $U(W) = -\frac{1}{W}$
 (2) $U(W) = \ln(W)$
 (3) $U(W) = -W^{-\gamma}$
 (4) $U(W) = -\exp(-\gamma W)$
 (5) $U(W) = \frac{W^\gamma}{\gamma}$
 (6) $U(W) = \alpha W - \beta W^2$

Questions:

(a) Check that they are well behaved ($U' > 0$ and $U'' < 0$) or state restriction on the parameters so that they are. For the utility function (6), take the positive α and β , and give the range of wealth over which the utility function is well behaved.

(b) Compute the absolute and relative risk aversion coefficients.

(c) What is the effect of parameter α (when relevant)?

(d) Classify the functions as increasing /decreasing risk aversion utility functions (both absolute and relative).

① $u(w) = -\frac{1}{w}$ a) $u'(w) = \frac{1}{w^2} > 0$ $u''(w) = -\frac{2}{w^3} < 0$ $\therefore$ well behaved b) $R(w) = \frac{-u''(w)}{u'(w)} = \frac{\frac{2}{w^3}}{\frac{1}{w^2}} = \frac{2}{w}$ $R'(w) = -\frac{2}{w^2}$ DARA $R_r(w) = 2$ $R'_r(w) = 0$ CRRA	② $u(w) = \ln(w)$ a) $u'(w) = \frac{1}{w} > 0$ $u''(w) = -\frac{1}{w^2} < 0$ $\therefore$ well behaved b) $R(w) = \frac{w}{w^2} = \frac{1}{w}$ $R'(w) = -\frac{1}{w^2}$ DARA $R_r(w) = 1$ $R'_r(w) = 0$ CRRA
--	---

③ $u(w) = -w^{-r}$ a) $u'(w) = r w^{-r-1} > 0$ $u''(w) = -r(r+1) w^{-r-2} < 0$ $\therefore$ well behaved if r is strongly positive b) $R(w) = \frac{-r(r+1)}{r w^{r+2}} \cdot w^{r+1}$ $= -\frac{(r+1)}{w}$ $R'(w) = \frac{-r+1}{w^2} < 0$ DARA $R_r(w) = -(r+1)$ $R'_r(w) = 0$ CRRA	⑤ $u(w) = \frac{w^r}{r}$ a) $u'(w) = w^{r-1}$ $u''(w) = (r-1) w^{r-2}$ $\therefore$ well behaved if $r < 1$ b) $R(w) = \frac{-(r-1) w^{r-2}}{w^{r-1}} = \frac{-r-1}{w}$ $R'(w) = \frac{r-1}{w^2} < 0$ DARA $R_r(w) = -(r-1)$ $R'_r(w) = 0$ CRRA
④ $u(w) = -e^{-rw}$ a) $u'(w) = r e^{-rw}$ $u''(w) = -r^2 e^{-rw}$ $\therefore$ well behaved if r is strongly positive b) $R(w) = \frac{r^2}{e^{rw}} \cdot \frac{e^{rw}}{r} = r$ $R'(w) = 0$ CRRA $R_r(w) = r w$ $R'_r(w) = r$ CRRA	⑥ $u(w) = \alpha w - \beta w^2$ a) $u'(w) = \alpha - 2\beta w > 0$ $u''(w) = -2\beta < 0$ $\therefore$ well behaved if $w < \frac{\alpha}{2\beta}$ b) $R(w) = \frac{2\beta}{\alpha - 2\beta w}$ $R'(w) = \frac{-2\beta}{(-\alpha - 2\beta w)^2} (-2\beta) > 0$ IARA $R_r(w) = \frac{2\beta w}{\alpha - 2\beta w}$ $R'_r(w) = \frac{(\alpha - 2\beta w)(2\beta) - (2\beta w)(-2\beta)}{(\alpha - 2\beta w)^2}$ $= \frac{2\alpha\beta - 2\beta^2 w^2 + 2\beta^2 w^2}{(\alpha - 2\beta w)^2} > 0$ IARA
