HW#11, Due May 6, 2021 Analyze the case the firm receives subsidy for the following two different cases to find out how the firm's quantity and profit change.

a) The government gives a lump sum subsidy of 20,000 bahts to each firm.

b) Suppose that the firm was producing 1,000 units and the government gives a subsidy of 20 bahts/unit so the total subsidy is also 20,000 bahts if the firm does not change its production of 1,000 units. Do you think, to maximize its profit with the subsidy of 20 bahts/unit, the firm will increase/decrease its production from 1,000 units? Does the firm receive higher profit? Does the firm receive more/less subsidy than 20,000 bahts?

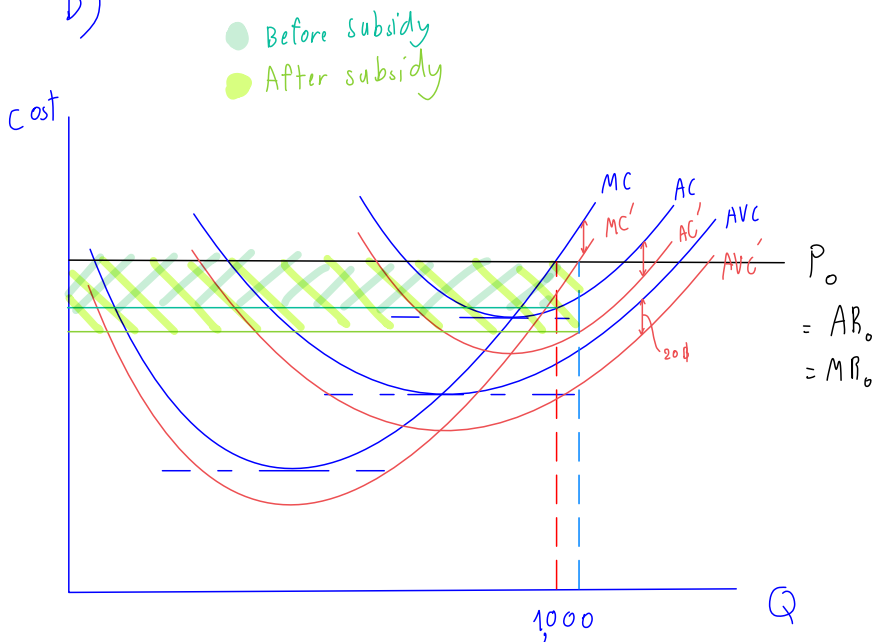

a) gives a LS subsidy of 20,000 ฿ ⇒ TFC decreasing

- Eq quantity Q^* don't change because MC and MR don't change and Q^* still satisfy eq. condition

- The profit increase equal to 20,000 ฿ because the amount of lower fixed cost of 20,000 ฿ subsidy

B) subsidy 20 ฿/unit

- To maximize its profit with subsidy of 20 ฿/unit, firm will increase its production from 1,000 unit

- firm receive a higher profit

- firm will receive more subsidy if they increase its production
