

How overpopulation affects Chinese society and policies

China is considered as one of the most enormous countries in the world, both by population and landmass. As of September 2019, China's estimated population via United Nations projections is 1.43 billion, excluding Taiwan, Hong Kong, and Macau. According to the previous researches, problems that arise from overpopulation could affect many aspects of the country, for instance, society, economy, environment and political wellbeing. Furthermore, overpopulation in china not only effects china itself, it also effects the neighbouring countries and indeed the planet. managing overpopulation is plainly very complicated and lengthy for the government. Thus, many policies have been enacted to compromise the difficulties. Some of those have a tremendous impact that can reshape the Chinese society and culture. This paper will address the cause of the incident and the fallout, the approach that the government of China utilize to tackle the problem, as well as the hypothesis about the state of the issue in the near future.
