

1.a In my opinion, Carbon neutrality is the efficient way to reduce green house gas by 2 method that will suit Thailand. For example, carbon offsets which will increase the green area in Thailand and stop consume fossil fuel from a beginning which will have impact on the future generation.

1.b Government can implement Emission charges for fossil fuel and creating a green house gas. This policy will reduce green house gas and cure global warming.

2. Agree, because it will be equalized over all the firm. Emission standard require the firm to reduce the pollution at the same amount.
