

MK 322 Retail Management

Chapter 12: Merchandise Planograms Handouts

By Ajarn Suwalya K.

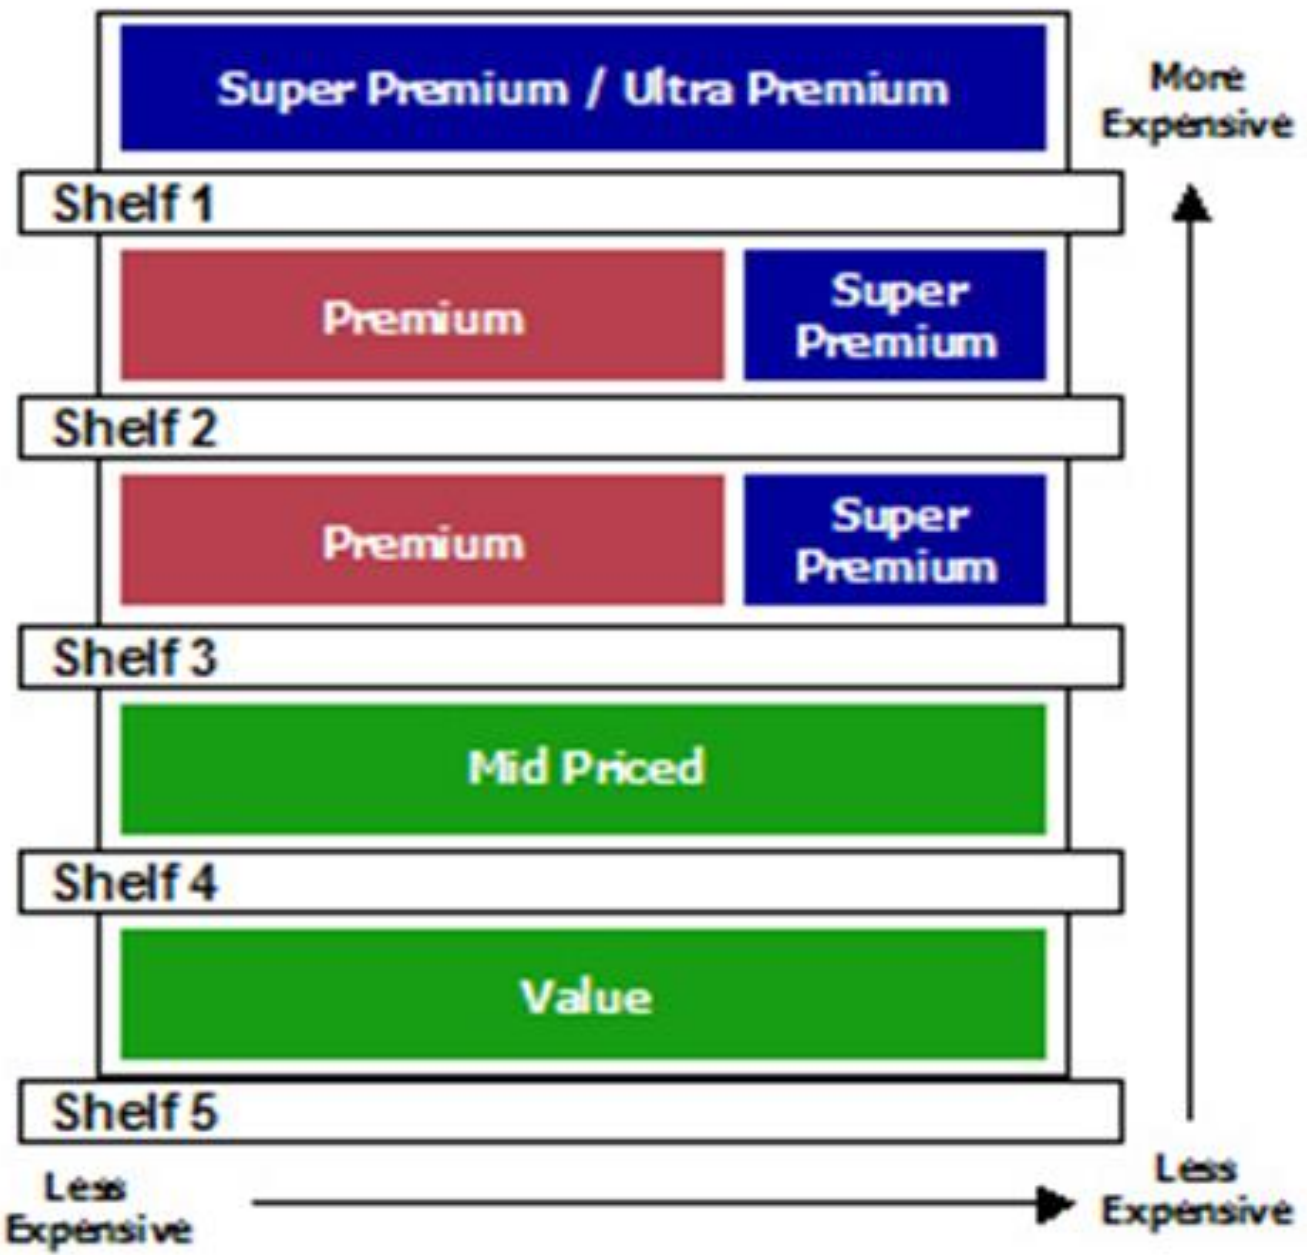

Planograms

- ▶ A planogram is a tool that retailers use to assist in the merchandising process. Basically, a planogram is a drawing or visual diagram that details where every product should be placed inside the store.
- ▶ The detail extends to specific departments in the store, specific aisles and even specific shelves.
- ▶ A planogram is created by using software that's designed for that specific task.
- ▶ A planogram may be very complex or relatively simple depending on the size of the store and number of products on the shelves.

Planogram

- In developing, retailers need to make the category visually appealing, consider the manner in which the consumers shop and achieve the retailers financial and strategic objectives.
- Planogrammer must be able to balance both art and science .Art (visual impact and presentation) and science (financial analysis).
- Use of technological software's to prepare.
- Use analyses of historical sales, gross margins, turnover, size of SKU, retailers design criteria-software determines the optimal shelf space and location for each SKU.
- Planograms are designed, tested and changed in a virtual shopping environment
- Also useful for those merchandise which does not fit into the shelf nicely
