

Instructions

- (1) Please read the instruction carefully. Also take this habit with you into the exam room.
- (2) Please read each question carefully and answer the questions straightforwardly. Always provide economic reasons at least a paragraph for your analysis, or a graph when necessary, even when the question does not indicate so.
- (3) Handing and submitting assignments are only available via BE Moodle.

Answering the questions and preparing answer sheets

- (1) Answers are to be handwritten, in either digital or analog form, in a blank canvas or any clean paper. Make sure that your handwriting is clearly visible and readable.
- (2) There is no need to rewrite the question. Just indicate the question number clearly for each of the answer, such as 1.a).
- (3) When done, for the digital case, collage all the pages into a single PDF file. For those who write on sheets of paper, take photo of all pages then convert all of them into a single PDF file as well.
- (4) **Name your PDF file as StudentID_YourNickname, such as 640123456_Bo.**

Submitting your answers

- (1) Make sure your file does not exceed 10MB. This is the maximum file size for BE Moodle upload.
- (2) Login to BE Moodle, head into the course, then the assignment topic.
- (3) Choose your file to submit. Done. There will be timestamp for your upload date and time, so please make sure to not submit later than that.

1. Belle is choosing ham (h) and cheese (c), which is assumed to be substitutable goods for her. Her total utility from each product is given in the table here.

Quantity	Total utility from ham (TU_h)	Total utility from cheese (TU_c)
1	15	12
2	26	21
3	35	27
4	41	32
5	45	35
6	48	37
7	49	38

Answer the following questions.

1.a) If Belle has \$7 budget and both ham and cheese cost \$1 each, how many units of ham and cheese she should purchase to maximize her utility? Explain your method clearly.

1.b) Provide a clear explanation why her utility will not be maximized if the condition that you apply in part a. is not yet satisfied.

1)

$P_H = \$1$

$P_C = \$1$

Budget = \$7

Quantity	Total utility from ham (TU _H)	Total utility from cheese (TU _C)	MV _H	MV _C	MV _H /P _H	MV _C /P _C
1	15	12	15	12	15 _H	12 _C
2	26	21	11	9	11	9
3	35	27	9	6	9	6
4	41	32	6	5	6	5
5	45	35	4	3	4	3
6	48	37	3	2	3	2
7	49	38	1	1	1	1

- a) decision #1 ; choose ham (15 > 12) ; money remain 7-1=6
 #2 ; choose cheese (12 > 11) ; money remain 6-1=5
 #3 ; choose ham (11 > 9) ; money remain 5-1=4
 #4 ; choose cheese (9 > 9) ; money remain 4-1=3
 #5 ; choose ham (9 > 6) ; money remain 3-1=2
 #6 ; choose cheese (6 > 6) ; money remain 2-1=1
 #7 ; choose ham (6 > 5) ; money remain 1-1=0

Belle choose 4 hams and 3 cheeses with all of her budget, therefore, her total utility (TU) is equal to $41 + 27 = 68$

b) Because if she choose ham more than cheese

or $\left(\frac{MU_H}{P_H} > \frac{MU_C}{P_C} \right)$ she will satisfied only choosing ham.

but the maximize condition (or equilibrium) states that

$\frac{MU_x}{P_x} = \frac{MU_y}{P_y}$ is the best so that she can consume

both ham and cheese in an equally amount.

Assignment 2

Assigned on Sep 22th, 2021. To be submitted on Oct 7th, 2021 before midnight.

2. A consumer finds that for him/her avocado (X) and nuts (Y) are substitutes. Assumed that this consumer yields 8 and 12 utils on IC_1 and IC_2 respectively, show your work and answer the following questions.

2.a) Measured from point A to B, assumed P_y is 10 baht per unit, how much P_x must be to make you conclude that the consumer's equilibrium is on point B?

2.b) Measured from point A to B, assumed P_x is 180 baht per unit, how much budget does this consumer has to achieve the equilibrium on point B?

2.c) Measured from point C to point D, how much is the average marginal utility per unit of avocado?

2.d) Show that this consumer's utility received from consuming avocado is in accordance with the law of diminishing marginal utility, using any essential information from any point. (But highly recommend that you consider all the points)

2)

$$a) P_y = 10$$

$$MRS = \frac{P_x}{P_y} = \frac{\Delta Y}{\Delta X}$$

$$= \frac{9-18}{4-2} = \frac{-9}{2} = -4.5 = 4.5$$

$$\therefore \frac{P_x}{P_y} = \frac{\Delta Y}{\Delta X}$$

$$\frac{P_x}{10} = 4.5$$

$$P_x = 45 \text{ \#}$$

b)

$$MRS = \frac{P_x}{P_y}$$

$$4.5 = \frac{160}{P_y}$$

$$P_y = 40$$

$$M = P_x X + P_y Y$$

$$= 160(4) + 40(9)$$

$$= 1,080 \text{ \#}$$

$$c) MB_c = \frac{\Delta TU}{\Delta X}$$

$$= \frac{12-8}{4-2} = 2$$

$$\begin{aligned}
 MU_D &= \frac{\Delta TU}{\Delta x} \\
 &= \frac{12-8}{8-4} \\
 &= 1
 \end{aligned}$$

$$\begin{aligned}
 \therefore MU_{C \rightarrow D} &= \frac{1+2}{2} \\
 &= 1.5 \neq
 \end{aligned}$$

d) $MU_x = \frac{\Delta \text{Utility}}{\Delta x}$
(from A \rightarrow C)

At A: $x=2, u=8$

C: $x=4, u=12$

$$MU_x \text{ (A} \rightarrow \text{C)} = \frac{u_2 - u_1}{x_2 - x_1} = \frac{12-8}{4-2} = \frac{4}{2} = 2$$

(From B to D)

At B: $x=4, u=8$

D: $x=6, u=12$

$$= \frac{u_2 - u_1}{x_2 - x_1} = \frac{4}{4} = 1$$

Law of diminishing MU
is when $MU \downarrow \rightarrow x \uparrow$.
