

# BACHELOR of ECONOMICS

**Thammasat University  
Faculty of Economics  
Bachelor of Economics (International Program)**

## AC201 Fundamental Accounting

Semester 1/2012

### Course Materials

**Topic:**

Chapter 7 Reporting and Interpreting  
Cost of Goods Sold and Inventory

**Session:**

Session #7

**Instructor:**

Assistant Professor Dr. Orapan Yolrabil

## CHAPTER 7: REPORTING AND INTERPRETING COST OF GOODS SOLD AND INVENTORY

Assistant Professor Dr. Orapan Yolrabil  
Department of Accounting  
Thammasat Business School  
Thammasat University

1

มาตรฐานการบัญชี ฉบับที่ 2 (ปรับปรุง 2552)  
เรื่อง  
สินค้าคงเหลือ  
คำแถลงการณ์

มาตรฐานการบัญชีฉบับนี้ได้ปรับปรุงให้เป็นไปตามเกณฑ์ที่กำหนดขึ้นโดย มาตรฐานการบัญชีระหว่างประเทศ เรื่อง สินค้าคงเหลือ พ.ศ. 2552 ซึ่งเป็นการแก้ไขของคณะกรรมการมาตรฐานการบัญชีระหว่างประเทศที่สิ้นสุดในวันที่ 31 ธันวาคม พ.ศ. 2551 (IAS 2 Inventories (Bound volume 2009))

**TAS2 Inventories**

Federation of Accounting Professions

2

## Nature of Inventory and Cost of Goods Sold

### Items included in inventory

- Inventory is tangible property that is
  - (1) held for sale in the normal course of business or
  - (2) used to produce goods or services for sale.
- Inventory is reported on the **Statement of Financial Position** as a **current asset**, because it normally is used or converted into cash within one year or the next operating cycle.

## Inventory and Cost of Goods Sold Presentation

### Statement of Financial Position

- Assets:
  - Current Assets:
    - **Inventory, net**
    - [Lower of cost or net realizable value]

Inventories include assets held for sale in the ordinary course of business (finished goods), assets in the production process for sale in the ordinary course of business (work in process), and materials and supplies that are consumed in production (raw materials).

### Statement of Comprehensive Income

- Net Sales
- **Less: Cost of goods sold**
- Gross profit

When inventories are sold and revenue is recognized, the carrying amount of those inventories is recognized as an expense (often called cost-of-goods-sold). Any write-down to NRV and any inventory losses are also recognized as an expense when they occur.

## Cost Included in Inventory Purchases

- **Goods in inventory are initially recorded at cost.**
  - Inventory cost includes the sum of the costs incurred in bringing an article to **usable** or **salable** condition and location.
    - The company should cease accumulating purchase costs when the raw materials are ready for use or when the merchandise inventory is ready for shipment.
      - Any additional costs related to selling the inventory to the dealers that are incurred after the inventory is ready for use should be included in selling, general and administrative expenses in the period they are incurred.

## Accounting for Inventories

### Perpetual Inventory System

- One keeping continual track of additions or deletions in materials, work-in-process, and cost of goods sold on a day-to-day basis.
- Physical inventory counts are usually taken at least once a year in order to check on the validity of the book records.
- Cost of goods sold is kept on a day-to-day basis rather than being determined periodically.

### Periodic Inventory System

- One that does not require a day-to-day record of inventory changes.
- Cost of materials used and costs of goods sold cannot be calculated until ending inventories, determined by physical count, are subtracted from the sum of beginning inventories and purchases (or cost of goods available for sales)

## Example on Inventory System

Information:

• Beginning inventory	100 units @	฿6	=	฿600
• Purchases	900 units @	฿6	=	฿5,400
• Sales	600 units @	฿12	=	฿7,200
• Ending inventory	400 units @	฿6	=	฿2,400

Perpetual Inventory System	Periodic Inventory System																		
<b>1. Beginning inventory 100 units at 600 Baht</b>																			
Inventory account shows 600 Baht.	Inventory account shows 600 Baht.																		
<b>2. Purchase of 900 units at 6 Baht per unit on credit</b>

Dr. Cost of goods sold	3,600																		
Ending inventory	2,400																		
Cr. Beginning inventory	600																		
Purchases	5,400																		

## Cost of Goods Sold Calculation -- Illustration

- **Perpetual inventory systems record cost of goods sold and keep inventory at its current balance throughout the year.**
  - Therefore, there is no need to record a year-end inventory adjustment unless the perpetual records disagree with the inventory count.
    - In addition, a separate cost of goods sold calculation is unnecessary since cost of goods sold is recorded whenever inventory is sold.
- **The inventory account in a Periodic inventory system keeps its beginning balance until the end of period adjustment to the physical count.**
  - Therefore, a separate cost of goods sold calculation is necessary.

Beginning inventory	600
+ Purchases	5,400
= Cost of goods available for sale	6,000
- Ending inventory	(2,400)
= <b>Cost of goods sold</b>	<b>3,600</b>

## Sales revenue, Cost of goods sold, and Ending inventory

- # of units sold
- x Unit price

Sales revenue

- # of units sold
- x Unit cost

Cost of goods sold

- # of units unsold
- x Unit cost

Ending inventory

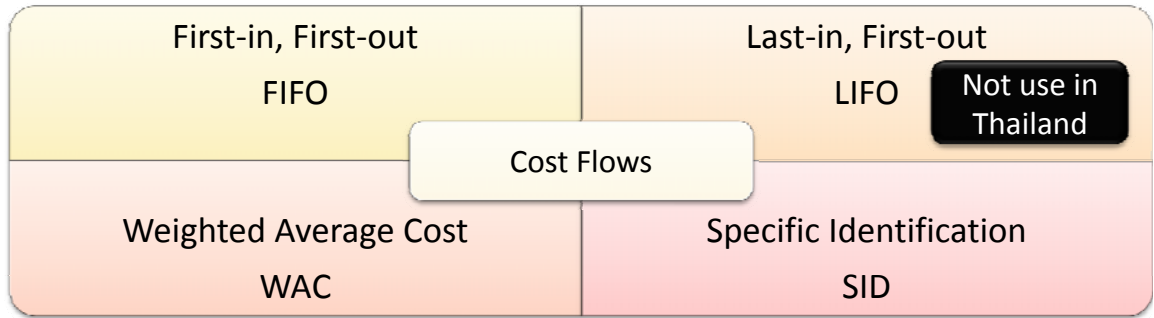

**Cost of goods available for sale:** The cost of all merchandise available for sale during the period; equal to the sum of beginning inventory and net purchases.

**Cost of goods sold:** The expenses incurred to purchase or manufacture the merchandise sold during a period.

## Inventory Cost Flows Assumptions and Inventory System

- FIFO
- LIFO
- WAC
- SID

Perpetual  
Inventory  
System

- FIFO
- LIFO
- WAC
- SID

Periodic  
Inventory  
System

### FIFO

- A method of inventory accounting in which the oldest remaining items are assumed to have been the first sold.

### LIFO

- A method of inventory accounting in which the most recently acquired items are assumed to have been the first sold.

**Not use in Thailand**

### WAC

- A method of inventory that takes cost of goods available for sale and divide it by the number of units available for sale to determine an weighted average cost per unit.

### SID

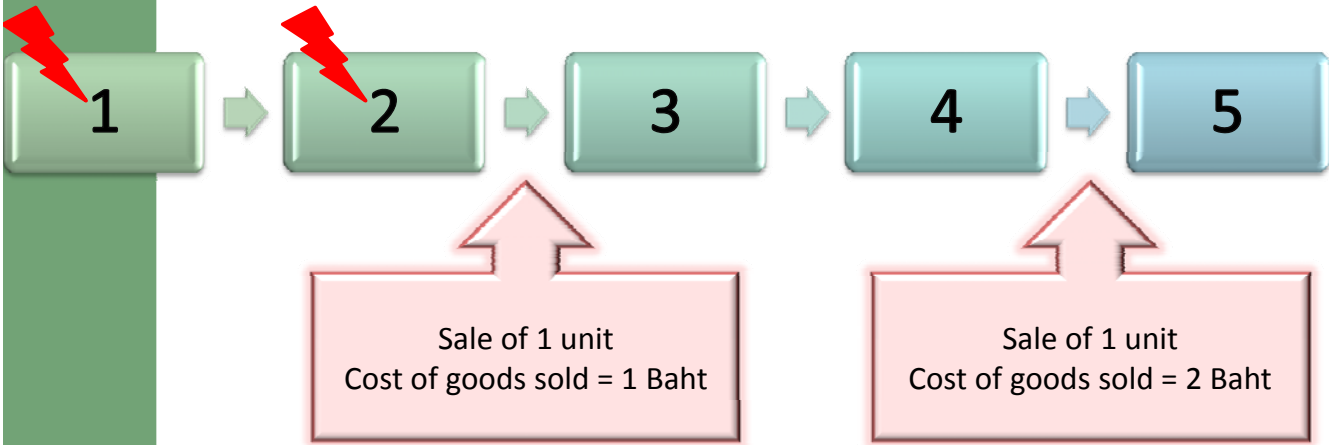

- Inventory method that considers the sale and cost of each item specifically.

## Perpetual & FIFO

Units available for sales = 5 units  
 Cost of goods available for sales = 15 Baht

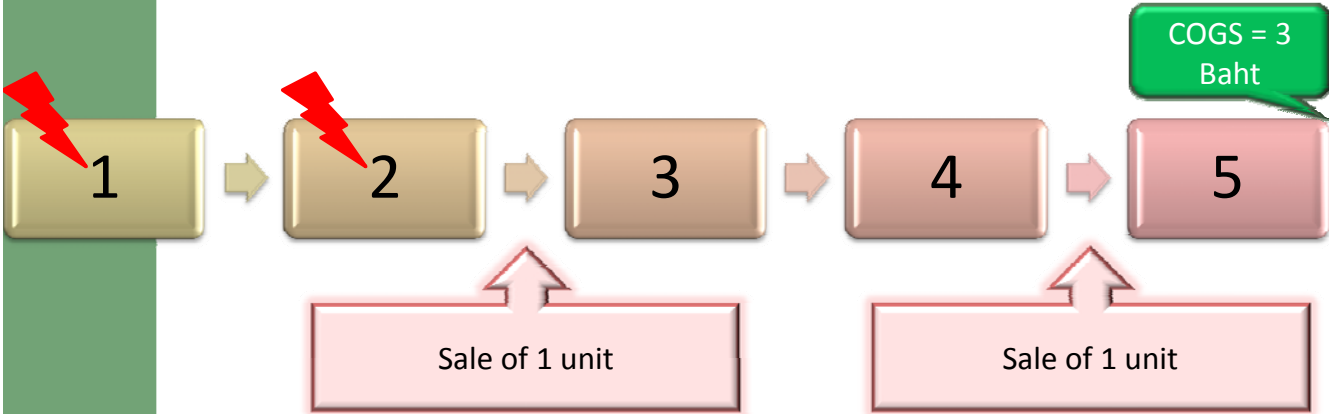

Cost of goods sold = 1+2 = 3 Baht  
 Ending inventory = 3+4+5 = 12 Baht

## Periodic & FIFO

Units available for sales = 5 units  
 Cost of goods available for sales = 15 Baht

Cost of goods sold = 1+2 = 3 Baht  
 Ending inventory = 3+4+5 = 12 Baht

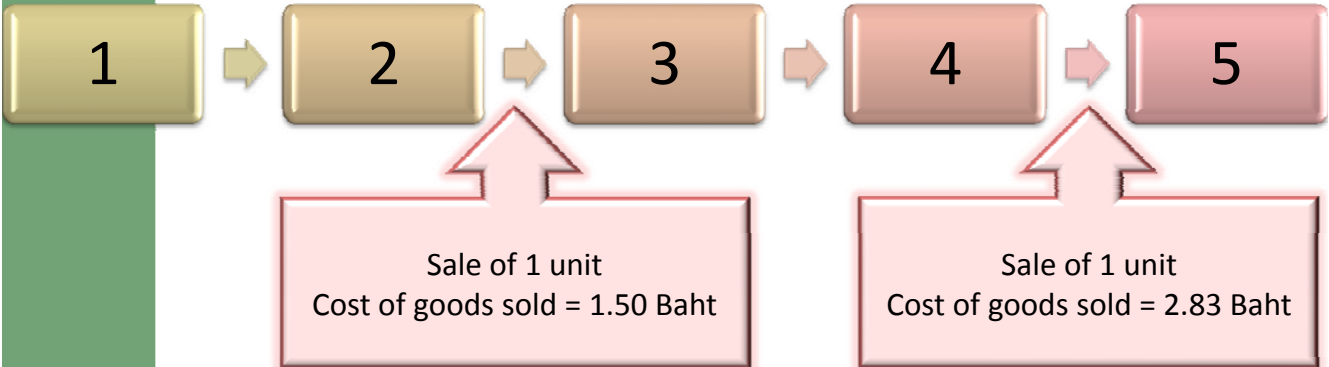

### Perpetual & Weighted Average

Units available for sales = 5 units  
 Cost of goods available for sales = 15 Baht

Cost of goods sold = 1.50+2.83 = 4.33 Baht  
 Ending inventory = 5.67+5.00= 10.67 Baht

Weighted average cost per unit for Sale #1  
 = Cost of goods available for sale /  
 # of units available for sale  
 = 3 Baht / 2 Units  
 = 1.50 Baht per unit

Weighted average cost per unit for Sale #2  
 = Cost of goods available for sale /  
 # of units available for sale  
 = 8.50 Baht / 3 Units  
 = 2.83 Baht per unit

### Periodic & Weighted Average

Units available for sales = 5 units  
 Cost of goods available for sales = 15 Baht

Cost of goods sold = 3 X 2 units = 6 Baht  
 Ending inventory = 3 X 3 units = 9 Baht

Weighted average cost per unit for the period  
 = Cost of goods available for sale / # of units available for sale  
 = 15 Baht / 5 Units  
 = 3 Baht per unit

## Perpetual & Periodic Inventory System Examples

### Cost of Goods Available for Sale

				Unit cost (Baht)	=	Amount (Baht)
Jan.	1	Beg. Inventory	10	units @	90	= 900
Feb.	3	Purchased	15	units @	105	= 1,575
Jul.	17	Purchased	20	units @	115	= 2,300
Aug.	28	Purchased	10	units @	120	= 1,200

### Retail Sales of Goods

				Unit price (Baht)	=	Amount (Baht)
Jun.	14	Sales	20	units @	130	= 2,600
Nov.	30	Sales	25	units @	150	= 3,750

## Perpetual Inventory System & FIFO

DATE	PURCHASES			COST OF GOODS SOLD			INVENTORY		
	Quantity	Unit cost	Total cost	Quantity	Unit cost	Total cost	Quantity	Unit cost	Total cost

## Periodic Inventory System & Weighted Average Cost

## Cost Flow Assumptions Compared

Inventory Valuation Methods: A Summary			
Valuation Method	Costs Alllocated to:		Comments
	Cost of Goods Sold	Inventory	
Specific identification	Actual cost of the units sold	Actual cost of units remaining	Parallels physical flow Logical method when units are unique May be misleading for identical units
Average cost	Number of units sold times the average unit cost	Number of units on hand times the average unit cost	Assigns all units the same average unit cost Current costs are averaged in with older costs
First-in, First-out (FIFO)	Cost of earliest purchases on hand prior to the sale	Cost of most recently purchased units	Cost of goods sold is based on older costs Inventory valued at current costs May overstate income during periods of rising prices; may increase income taxes due
Last-in, First-out (LIFO)	Cost of most recently purchased units	Cost of earliest purchases (assumed still in inventory)	Cost of goods sold shown at recent prices Inventory shown at old (and perhaps out of date) costs Most conservative method during periods of rising prices; often results in lower income taxes

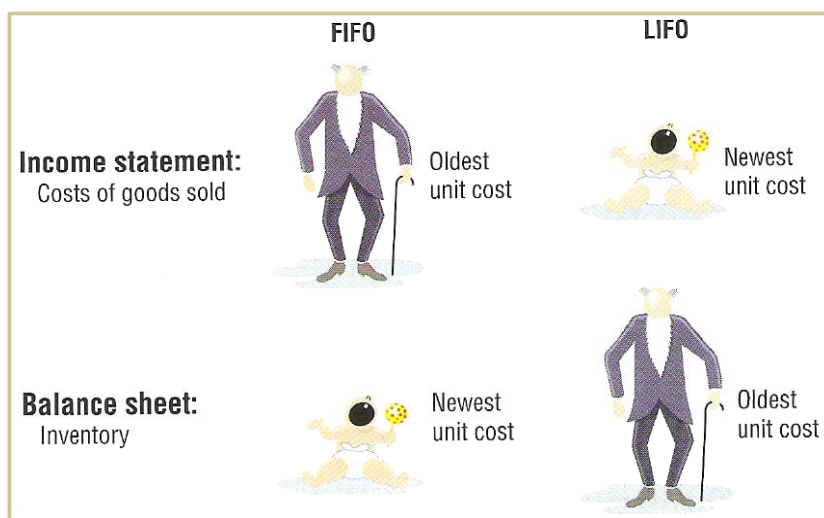

## LIFO-FIFO combined with Periodic and Perpetual

- When using FIFO, the COGS and Ending inventory are the same for both perpetual and periodic.
- When using LIFO (and Weighted Average), the perpetual and periodic recording methods do not give the same value for COGS and Ending inventory.
  - In a period of rising prices (inventory costs are rising), COGS under LIFO PERIODIC will either be equal to (rarely) or greater than (usually) COGS using LIFO PERPETUAL.

## FIFO VS. LIFO

**Cost of Goods Sold**  
*(on the income statement)*

**Inventory**  
*(on the balance sheet)*

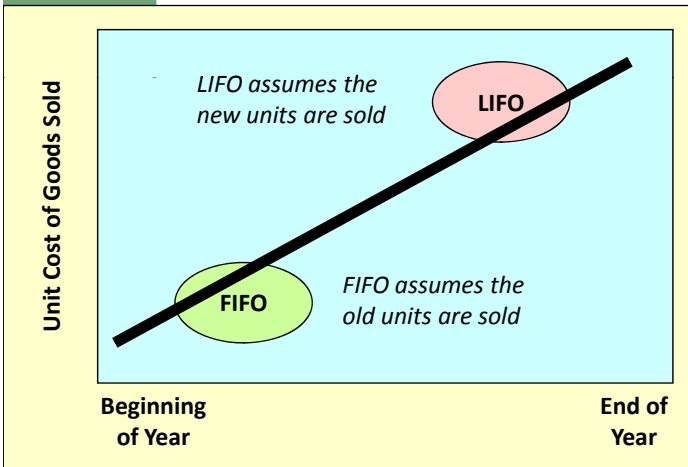

FIFO  
LIFO

First-in (oldest) unit costs  
Last-in (newest) unit costs

Newest unit costs  
Oldest unit costs

## FIFO and LIFO in Time of Inflation

### Increasing Costs: Normal Financial Statement Effects

	FIFO	LIFO
Cost of goods sold	Lower	Higher
Net income	Higher	Lower
Income taxes	Higher	Lower
Inventory	Higher	Lower

### Decreasing Costs: Normal Financial Statement Effects

	FIFO	LIFO
Cost of goods sold	Higher	Lower
Net income	Lower	Higher
Income taxes	Lower	Higher
Inventory	Lower	Higher

### AC201 Fundamental Accounting

#### 4.4 Inventories

Inventories are valued at the lower of cost (weighted average basis) and net realisable value. Cost of finished goods and work in process comprises all production costs and attributable factory overhead.

Raw and packing materials, spare parts and factory supplies are charged to production costs whenever consumed.

## 8. INVENTORIES

(Unit : Baht)

	2010	2009
Finished goods	1,751,273	2,088,021
Work in process	3,382,346	3,700,422
Raw materials	57,109,332	48,277,068
Packaging materials	38,788,865	33,782,012
Spare parts and factory supplies	39,898,805	29,082,225
