

1.) Case and Problem

Case : Cambodia build the China's Belt and Road initiative, the dam

Problem . the dam destroy the fish ecosystem . People lost job, house, farm and their community .

2. Economic insights

- Economy slow down in the future .

for people who catch fish as a job, which fishery is the major income for people in Cambodia.

Also Cambodia decrease in vegetable and herbs because the land is dry and difficult to farm .

- Government intervention might not be effective enough .

as they still have the question that " it was worth the cost plus electricity is still in short supply and unreliable in Cambodia .

- The Chinese government may be providing badly needed loans for infrastructure development .

3.) The economy - environment interaction

invest money to Build dam → destroy ecosystem
