

Homework

Market supply for kidneys

1.

Seller don't want to sell their kidneys for under 100 m

Seller (A) is willing to sell their kidneys for at least 100m to more than 300m

Seller (B) is willing to sell their kidneys for at least 300m and more

2. How D and S increase in Extreme cases

If there is an extreme cases, the Demand and Supply for seller

(A) kidney would greatly increase because people want to buy kidney from seller A more (cheaper) so the supply would increase too because seller want to sell at this price.

Demand and Supply for seller (B) would increase too but not too much because people would choose from seller A first.
