

SOUTH KOREA'S NET ZERO TARGET

2019–2030

POWER SECTOR

Fully implemented the Eighth Electricity Plan could lead to about 20% reduction in electricity related emissions.

TRANSPORT SECTOR

Number of electric vehicles sale is double from 2017–2018 which is about 2% of total new car sale in 2018. Government offer some special privileges to those people who use electric vehicles for example tax reduction.

ENERGY SECTOR

The Renewable Portfolio Standards is the main policy instrument to promote renewable energy

INDUSTRY SECTOR

Minimize the use of fossil fuel as the raw material for production process and announces the new policy that all the industry should install the waste water filter to prevent water pollution

AGRICULTURE

Forbid the use of chemical or insecticide and reduce fertilizers and livestock

2030–2050

POWER SECTOR

100% the use of electric vehicles with the fully developed charging infrastructure. Install the charging base all over the country.

ENERGY SECTOR

Replace the use of fossil fuel with the renewable source of energy that will not affect the environment and cause no CO2 emission

INDUSTRY SECTOR

Minimize the number of greenhouse gases emissions occur from the production process. Use biomass as the source of high temperatures heat to avoid damaging environment.

AGRICULTURE

Fully remove the use of chemical fertilizers and insecticide that will affect environment as well as the consumer.
