

Difference Communication Styles between Men and Women

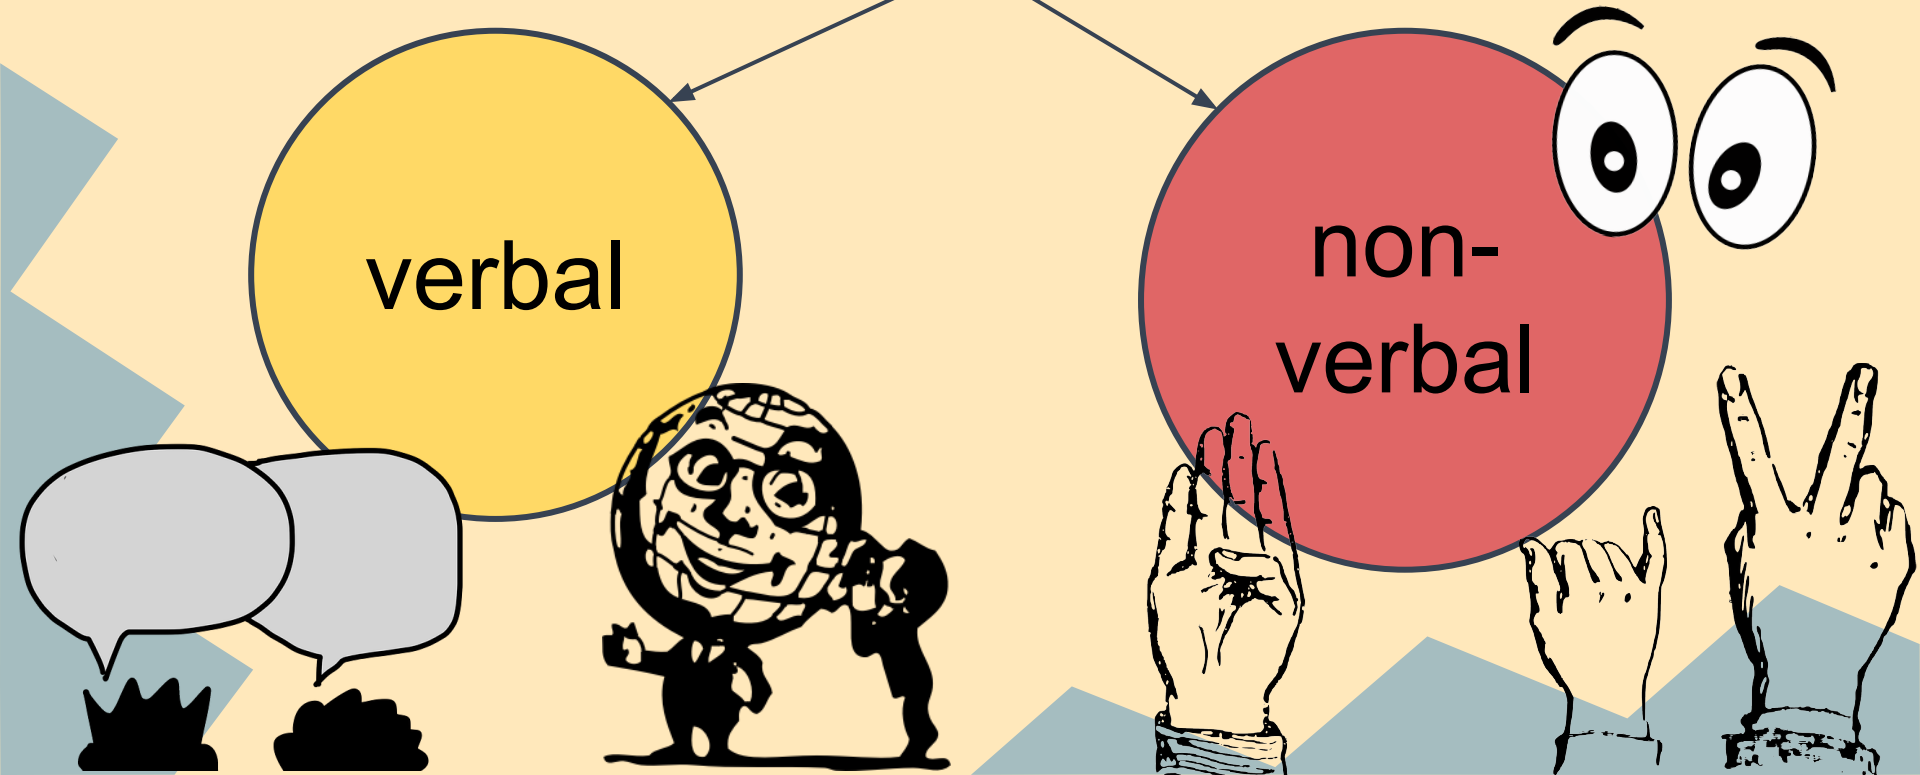

John Gray's 1993 classic book;
'Men are from Mars, Women are from Venus'

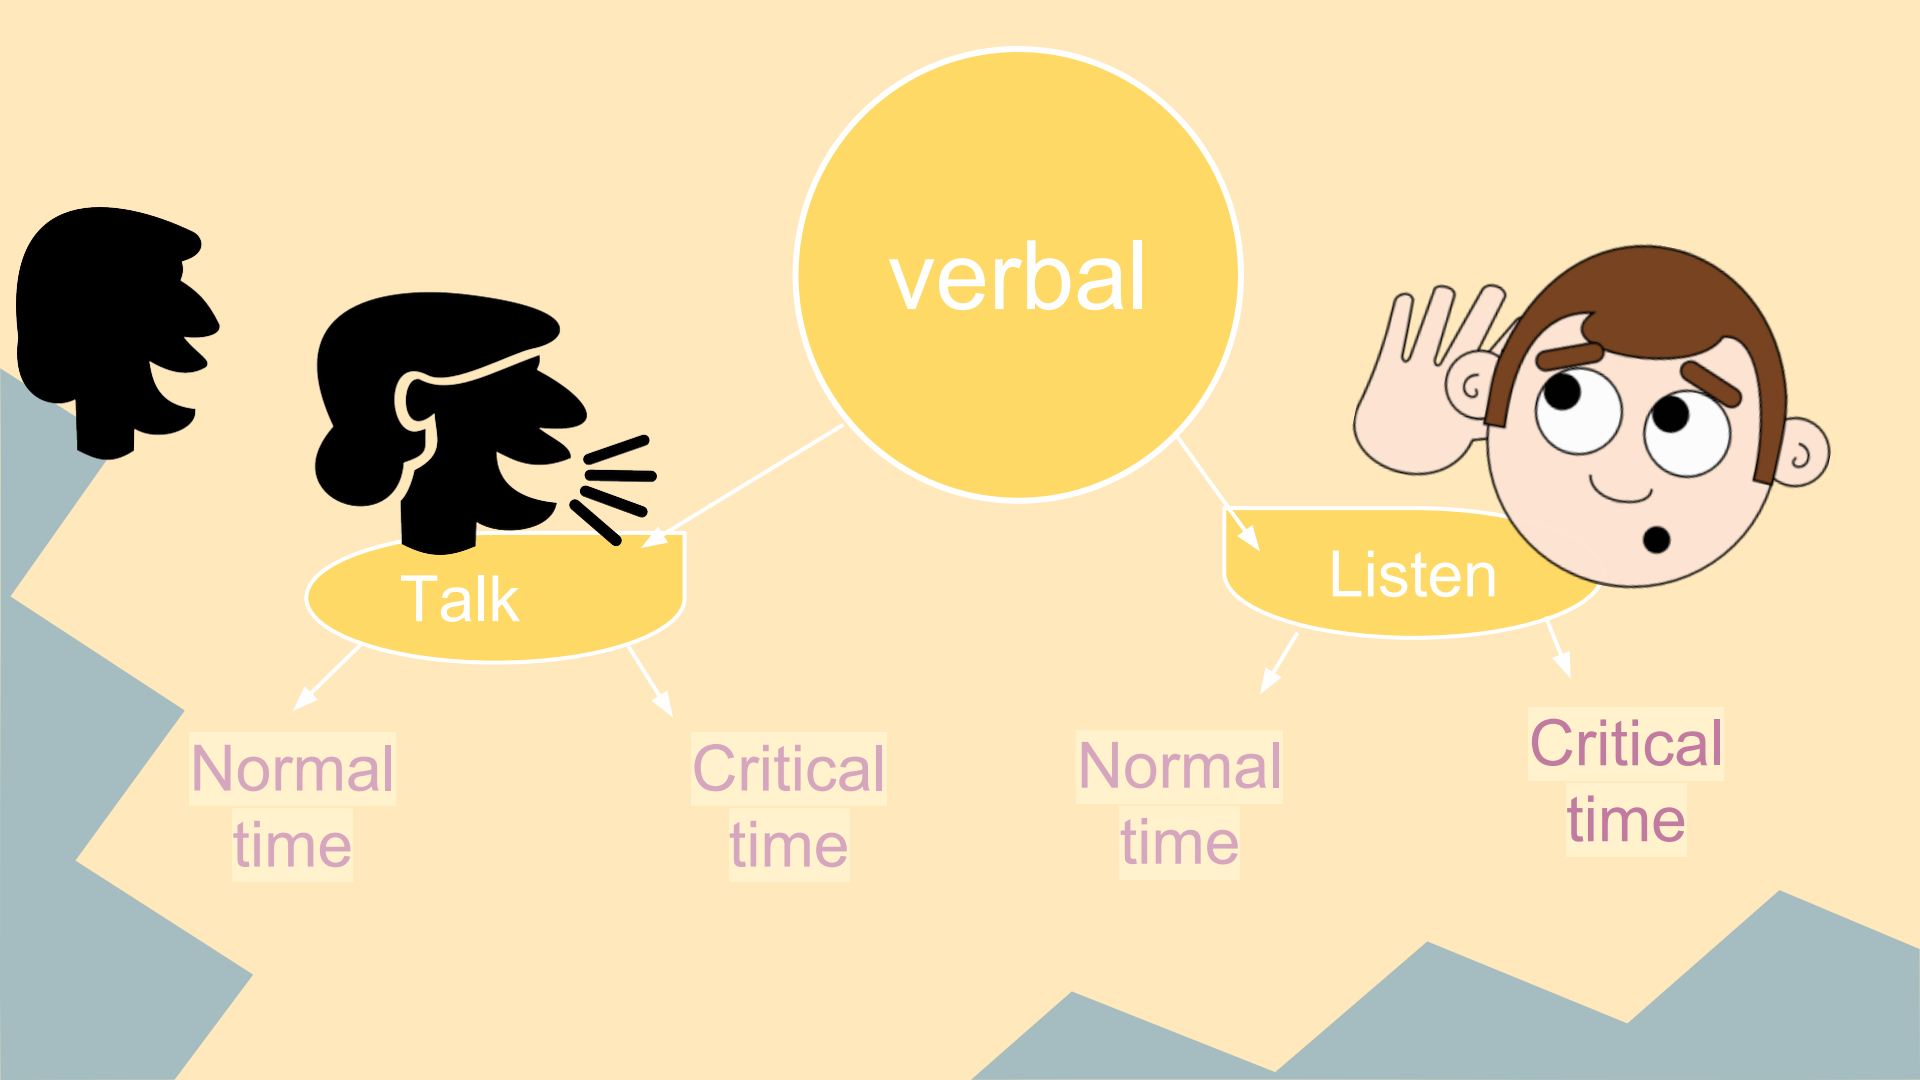

communication

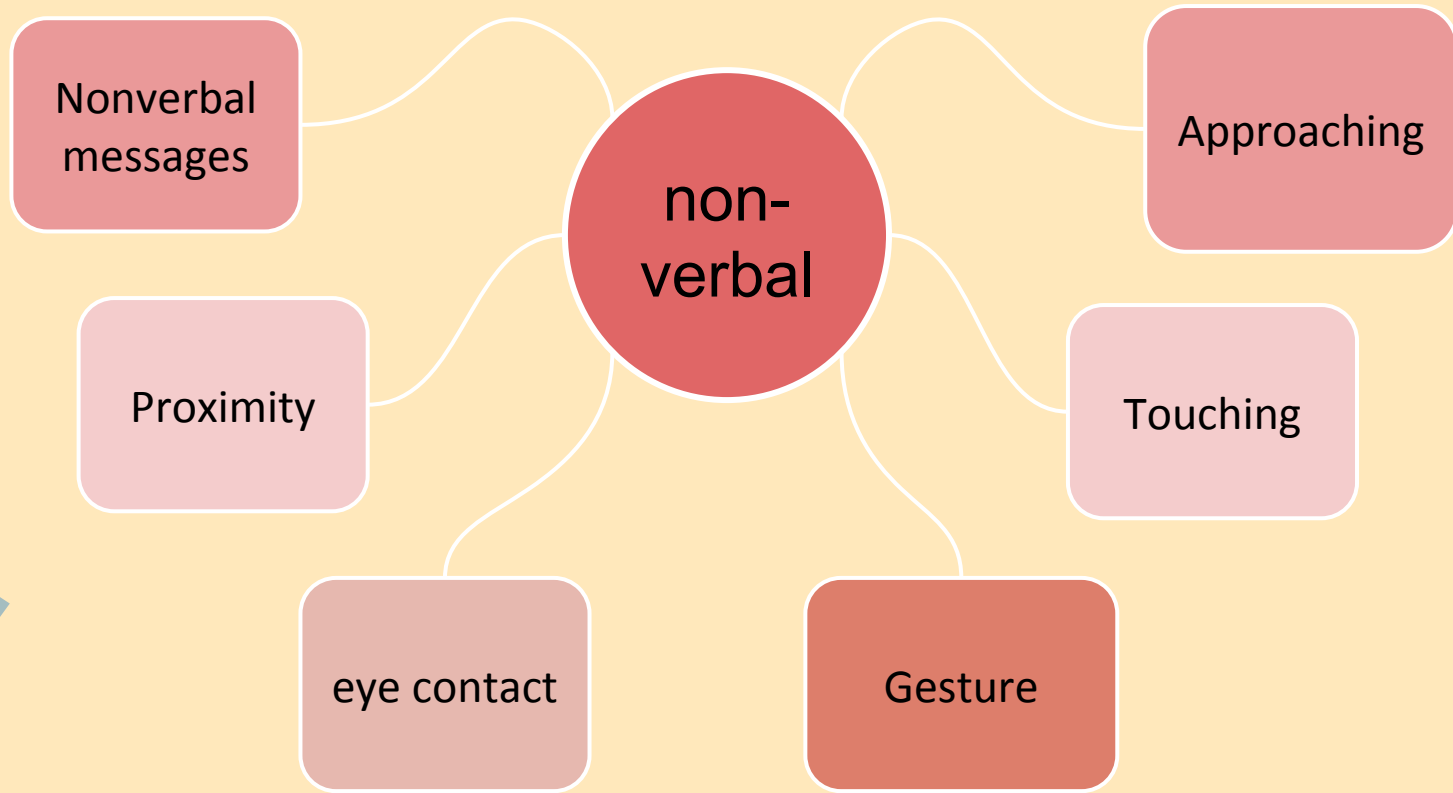

divided into two parts;

verbal

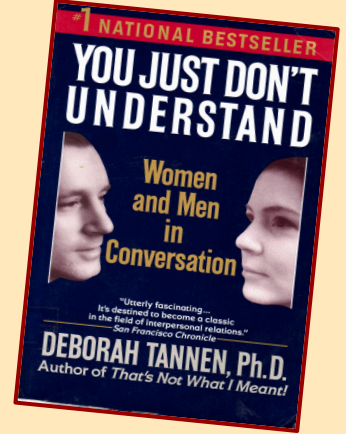

non-
verbal

Theories or Studies

1. Literature review

1.1 Deborah Tannen

: Difference Theory in the book "You just don't understand" by sociolinguist.
his 6 dimensions is followings ;

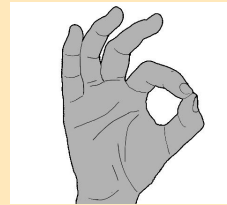

1) Status vs. support

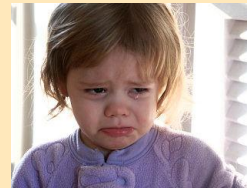

2) independence vs. intimacy

3) advice vs. understanding

4) information vs. feelings

5) orders vs. proposals

6) conflict vs. compromise

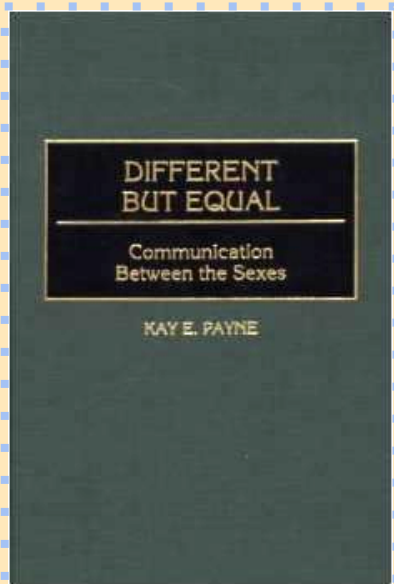

Theories or Studies con.

1. Literature review

1.2 Kay E. Payne

: in the book "Different But Equal: Communication Between the Sexes"
Nonverbal differences have been categorized as being:

1. Primary - hereditary characteristics of male and femaleness

2. Secondary - modeling or observation of same-sex role models.

3. Tertiary - popular explanations of reinforcement or conditioning for male or female behavior.

Criticism

Mulac

- When applied to written work, a difference in communication between men and women is difficult to tell
- Individuals of non-English backgrounds, of different ages and social classes who were are not able to distinguish whether written English messages had been produced by males or females.
- If such differences exist in speech then these should be an observed difference in writing style.

*Chalres
R. Martin*

- There is no difference in communication styles between genders.
- People have different communication styles based on Carl Jung's theory and Isabel Myers's work on the Myers-Briggs Type Indicator (MBTI)

Conclusion

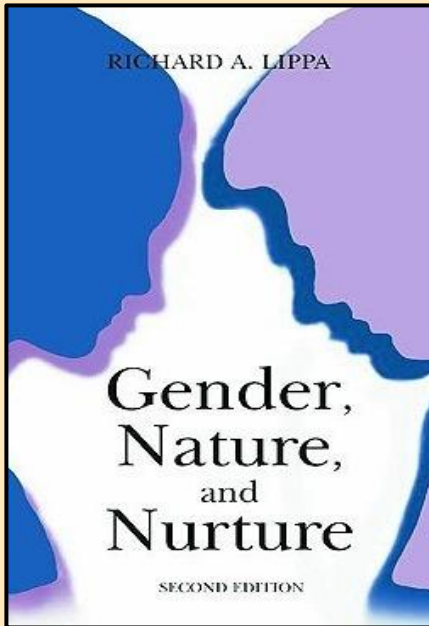

; Literature reviews of gender differences do not help considering verbal communication.

Theories or Studies con.

2. Biological factor

(scientific studies)

; *Richard A. Lippa* in the book “Gender, Nature, and Nurture”

- Structural differences in the brain of men and women account for the greater verbal fluency.
- Women are thought to permit better communication between hemispheres.
- Women use words more expressively than men. Based on brain differences women are better communicators than men, a difference that probably existed at birth.

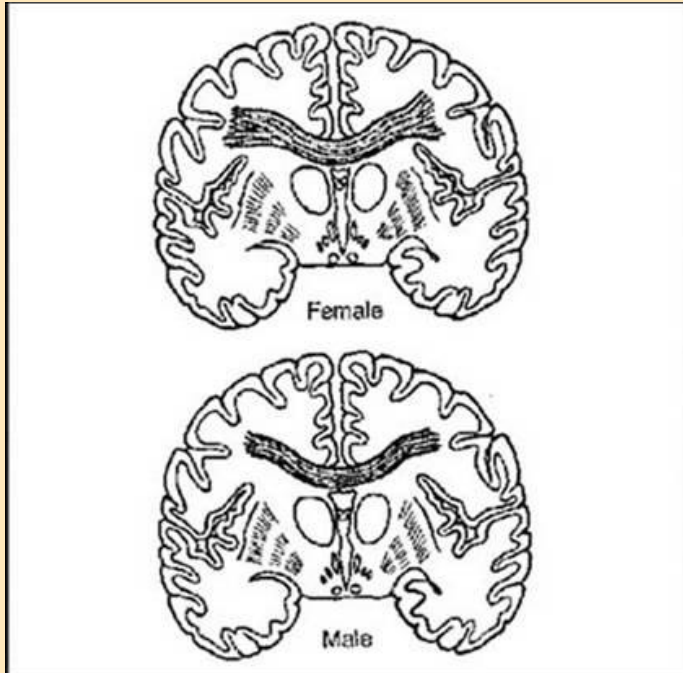

Theories or Studies con.

2. Biological factor

(scientific studies)

; Richard A. Lippa in the book "Gender, Nature, and Nurture"

- The corpus callosum is larger in women than in men.

Conclusion

Verbal communication is said to be different among men and women.

Literature view

- Genders cannot determine verbal communication while nonverbal communication can differ among genders.

VS

Scientific studies

- Different brain structures results in the difference in verbal communication

***** There is no right or wrong conclusion. It is the matter of your belief whether it coincides with which studies*****
