

Table of Contents

Chapter 0 Introduction

Part I Systems of Linear Equations and Linear Algebra

Chapter 1 System of Linear Equations

- 1.1 System of Linear Equations
- 1.2 Solving System of Linear Equations by Gaussian Elimination Method

Chapter 2 Matrices

- 2.1 Matrices
- 2.2 Matrices and System of Linear Equations
 - 2.2.1 Row Echelon Form and Reduced Row Echelon Form
- 2.3 Rank of a Matrix
- 2.4 Rank and Solutions of System of Linear Equations

Chapter 3 Matrix Algebra

- 3.1 Matrix Operations
- 3.2 Matrix Representation of System of Linear Equations
- 3.3 Laws of Matrix Operations
- 3.4 Transposition of a Matrix
- 3.5 Special Types of Matrices
- 3.6 Elementary Matrices and Elementary Row Operations

Chapter 4 Determinants

- 4.1 Motivations for the Definition of Determinants
- 4.2 Properties of Determinants
- 4.3 Determinants of Product of Matrices
- 4.4 Determinant and Rank

Chapter 5 Inverses

- 5.1 Properties of Inverse
- 5.2 Computation of Inverse
 - 5.2.1 Computing Inverse by Elementary Row Operations
 - 5.2.2 Computing Inverses by Adjoint Matrix
- 5.3 Inverse and Determinants
- 5.4 Cramer's Rule

Chapter 6 Linear Dependence of a Set of Vectors

- 6.1 Linear Dependence and Independence
- 6.2 Linear Independence and system of Linear Equations
- 6.3 Alternative Definition of Linear Dependence
- 6.4 Linear Dependence and Rank
- 6.5 Graphical Illustration of Linear Dependence

Appendix Graphical Representation of Scalar Multiplication and Addition of Vectors

Chapter 7 Vector Spaces

- 7.1 Vector Spaces and Subspaces
- 7.2 Spanning Sets and Basis of Vector Space
- 7.3 Dimension of Vector Space
- 7.4 Row, Column and Null Spaces
- 7.5 Dimension of Row Space and Rank
- 7.6 Dimension of Row and Column Spaces

- 7.7 Linearly Independent Rows and Row Space
- 7.8 Fundamental Theorem of Linear Algebra
- 7.9 Orthogonality between Row and Null Spaces

Chapter 8 Eigenvalues and Eigenvectors

- 8.1 Characteristic Polynomial and Characteristic Roots
- 8.2 Cayley-Hamilton Theorem
- 8.3 Distinct Eigenvalues and Linear Independence of Eigenvectors
- 8.4 Matrix Diagonalization and Decomposition
- 8.5 Applications of Eigenvalues and Eigenvectors in Dynamic Systems
 - 8.5.1 Application 1: Homogeneous System of Linear Difference Equations
 - 8.5.2 Application 2: Nonhomogeneous System of Linear Difference Equations
 - 8.5.3 Application 3: Dynamics of Left and Right Eigenvectors
- 8.6 Eigenvalues and Eigenvectors of Symmetric Matrix

Part II Analysis

Chapter 9 Elements of Set Theory

- 9.1 Relation between Sets
- 9.2 Operations on Sets
- 9.3 Law of Set Operations
- 9.4 Cartesian Product of Sets

Chapter 10 Relations and Functions

- 10.1 Relations
- 10.2 Complete, Reflexive and Transitive Relation
- 10.3 Functions
- 10.4 Image of Function
- 10.5 Onto and One-to-One Function
- 10.6 Inverse Function

Chapter 11 Elementary Topology

- 11.1 Metric Spaces
- 11.2 Open and Closed Sets
- 11.3 Interior and Boundary of a Set
- 11.4 Closure of a Set
- 11.5 Bounded Sets
- 11.6 Compact Sets and Heine-Borel Theorem

Chapter 12 Continuous Functions

- 12.1 Definition of Continuity
- 12.2 Properties of Continuous Functions
- 12.3 Existence of Extreme Values (Weirstrass Theorem)
- 12.4 Convex Sets
- 12.5 Brouwer's Fixed Point Theorem

Part III Calculus

Chapter 13 Calculus of Single Variable

- 13.1 Derivatives
- 13.2 Derivative Formulae
- 13.3 Differentials
- 13.4 Second and Higher-Order Derivatives

- 13.5 Differentiability and continuous Differentiability
- 13.6 Rolle's Theorem and Mean Value Theorem
- 13.7 Taylor's Polynomials and Taylor's Approximation on $\mathbf{R}$
- 13.8 Monotonic Functions and Derivatives

Chapter 14 Calculus of Several Variables

- 14.1 Partial Derivatives
- 14.2 Total Differentials
- 14.3 Differentiability and Continuous Differentiability of Functions of Several Variables
- 14.4 Conventions of Matrix Notations for Derivatives of functions of Several Variables
- 14.5 Young's Theorem
- 14.6 Chain Rules of composite functions of Several Variables
- 14.7 Directional Derivatives
- 14.8 Directional Derivatives and Optimization
- 14.9 Second-Order Directional Derivatives
- 14.10 Mean Value Theorem in $\mathbf{R}^n$
- 14.11 Taylor's Polynomials and Taylor's Approximation in $\mathbf{R}^n$
- 14.12 Implicit Functions and Implicit Function Theorem
- 14.13 Level Sets, Tangents and Gradients
- 14.14 More Chain Rules

Chapter 15 Convexity, Quadratic Form and Its Definiteness

- 15.1 Convex and Concave Functions
- 15.2 Quadratic Functions
- 15.3 Definiteness of Quadratic Form
- 15.4 Convexity of Twice Differentiable Functions and Definiteness of the Hessian
- 15.5 Definiteness, Nonsingularity and Eigenvalues
- 15.6 Test of Definiteness

Part IV Optimization

Chapter 16 Unconstrained Optimization

- 16.1 General Optimization Problem
- 16.2 Unconstrained Optimization
- 16.3 First-Order Necessary Condition in $\mathbf{R}$
- 16.4 Second-Order Necessary Condition in $\mathbf{R}$
- 16.5 First- and Second-Order Sufficient Conditions in $\mathbf{R}$
Necessary Conditions for Unconstrained Optimization in $\mathbf{R}^n$
- 16.6 Sufficient Conditions for Unconstrained Optimization in $\mathbf{R}^n$
- 16.7 Concavity, Convexity and Globally Optimal Solutions

Chapter 17 Constrained Optimization

- 17.1 Optimization under One Equality Constraint in $\mathbf{R}^2$
- 17.2 First-Order Necessary Conditions: One Equality Constraint in $\mathbf{R}^2$
- 17.3 Lagrange Method
- 17.4 Lagrange's Theorem: First-Order Necessary Conditions
- 17.5 Second-Order Sufficient Conditions: Equality Constraints
- 17.6 Second-Order Necessary Conditions

Chapter 18 Constrained Optimization: Inequality Constraints

- 18.1 First-Order Necessary Conditions: One Inequality Constraint
- 18.2 First-Order Necessary Conditions: Several Inequality Constraints
- 18.3 First-Order Necessary Conditions: Mixed Constraints
- 18.4 First-Order Necessary Conditions: Minimization under Mixed Constraints
- 18.5 Second-Order Sufficient Conditions: Mixed Constraints
- 18.6 Second-Order Necessary Conditions
- 18.7 Kuhn-Tucker Formulation
- 18.8 Applications
- Appendix** Proof of Lemma 18.1

Chapter 19 Sensitivity analysis and Envelope Theorems

- 19.1 The Meaning of the Multipliers
- 19.2 Lagrange Multiplier: One Equality Constraint Case
- 19.3 Lagrange Multiplier: Several Equality Constraint Case
- 19.4 Lagrange Multiplier: Inequality Constraint Case
- 19.5 Envelope Theorems
- 19.6 Envelope Theorem: Unconstrained Case
- 19.7 Envelope Theorem: Equality Constraints
- 19.8 Applications: Shephard's Lemma, Roy's Identity and Demand Function
- 19.9 Envelope Theorem: Inequality Constraints

Chapter 20 Quasi-Concavity

- 20.1 Level Sets, Superior Sets and Inferior Sets
- 20.2 Quasi-Concave and Quasi-Convex Functions
- 20.3 Concave Programming
- 20.4 Characterization of Quasi-Concave Differentiable Functions

Chapter 21 Homogeneous and Homothetic Functions

- 21.1 Homogeneous Functions
- 21.2 Properties of Homogeneous Functions
- 21.3 Equivalent Functions
- 21.4 Homothetic Functions
