

Quiz 2

(5 points)

Time: 22 September 2021 at 15:00-15:30 (30 minutes)

There are 2 questions. You need to answer all two questions. Please **submit** your answers in a PDF file with a file name “**Quiz2_StudentID_FirstName Surname**” via BE Moodle class before **15:40**.

Write a paragraph to answer two questions below:

Question 1: What are the problems in water resource management? (2.5 points)

Question 2: What could be a source of inefficient allocation of land? (2.5 points)

Question 1: What are the problems in water resource management? (2.5 points)

I think one of the key issues about water resource management is the population is continue to increase so the demand to use water is also increasing. Most of basic need of human have to do something with water for example food, housing area. Less water resource being less available and led to mining of the resource. Expanding plantation and opening new area are also impacts on water resources. All of those activity might affect the water supply for the future availability and water quality as well.

Question 2: What could be a source of inefficient allocation of land? (2.5 points)

Land use change might be one of the source of inefficient allocation of land. To reduce amount of land and increase amount of area to provide food and timber production. It will lower the quality of land resources and future productivity. Some of people that no longer benefit from those land will try to renting the land or custom work which might cost the negative benefit. As the population is now increase, people will try to increase the rural area to use and tempt to use all of natural resources for their own benefit and last example is using those area without the need to pay for preserving the land and it. Low valued uses could dominate high valued uses by default.
