

Essay 1 ; 18th July,2019

On this day, we have a guest whose talk about doing business in Vietnam. Siam Gas is the firm in which invest in Vietnam and named as Supergas. They explain about the region, policy, behavior of Vietnam people which important data if we want to invest in there country.

He talk briefly about this foundation of the firm. In 2013, they buy shell gas in Vietnam. They also have big storage in Zhuhai and Shantou in China. In Indonesia, they also have floating storage. The big problem of the firm doing in Vietnam is they support oil price but not support gas. In Vietnam, there are many region which is North Mountain-Midland, Red River Delta, North Central, South Central, Central Highland, SE, and Mekong Delta. They have many region since there are different culture-language. For example, the people in the North always dinner at home but people at South prefer dinner outside, the one who want to invest in restaurant have to invest in the South.

The reason why we want to invest in Vietnam is new open development country and lead to less competitor. If i am an investor and i want to invest in Vietnam, i will invest in the windmill and solar cell as i present in the room because in the trip, we ate Korean barbecue and the light off two times which mean the electricity is not enough and Vietnam also have many high mountain which can located the windmill. Why solar cell? Vietnam is very hot and sunny country as i go in field trip. I think it work better than Thailand if i create the solar cell but i still not research about where to located. This class is similar to SCG class in Vietnam trip which explain about the overall in Vietnam, the region, some policy of investing, and the behavior of Vietnamese.

All in all, Vietnam is the good option for investor for investing now but every investment have a risk and we have to concern about how long of our firm can be since it is interesting country, there are many investor invest in in that too,not only us.

Essay 2 ; 19th July, 2019

As we have a chance to go to Fintech Fair 2019 at Bank Of Thailand, there are many famous investors there and sharing the knowledge about the future investment.

The main of this event is about the technology which in the conference room talk about future currency. The currency in which in the mobile phone or electronic system. I have talk with the speaker and ask him about what is the future about cashless society and they told me like they cannot confirm that in the future we will use e-wallet for sure since maybe the user are not trust with the owner of e-wallet and they will not deposit all of the money with e-wallet since it may occur crisis or something.

In my opinion about cashless society, there are advantages and also disadvantages too. The comfortable is one of the advantages of e-wallet, we can use everywhere and it is unnecessary to use real wallet anymore. But the safety of your wallet may worse, if your mobile phone loss, you may lose all of your money of your life and if your mobile phone run out of battery, you do not have money to use.

The technology of each bank are similar. The QR code is popular now and the bank try to use QR code society which more convenient. The Krungsri bank try to use QR code to use oversea country and try to use the lower currency than Visa or Mastercard and no more charge.

In the evening, we went to ADB which located at Central World. The ADB stand for Asian Development Bank which have many partner. They talk about the data of them and the website,

In conclusion, we also go two place which can affect our life in the future. It such a long day and make me cannot concentrate with ADB much. We gain a lot knowledge. After this two place, i went to Rubnong and do not have more energy.
