

Final Exam Quiz

THOSE WHO COPY YOUR FRIENDS OR LET YOUR FRIENDS COPY YOU WILL BE AWARDED ZERO.

ปด ผมจดไว้แล้วนะครับว่าตอนมิตเทอมใครลอกของใคร ครั้งนี้ขอเตือนเลยว่าผมไม่ยอมแล้วนะครับ

ผมต้องลงโทษ ไม่งั้นต่อไปคงไม่มีใครอยากซื้อสตั๊ด

Submission Guide: You can upload up to 3 files on Moodle. If the whole file is too large, you should break it down and upload 3 files, each containing 1 question.

Question 1

Draw 3 diagrams (Keynesian Cross, Money Market, IS-LM) to **show and briefly explain** the followings:

- The crowding-out effect when the government increases its spending
- Another policy that can be used to avoid the crowding-out effect

Question 2

Draw the IS-LM diagram. **Pick ANY point on either the IS curve or the LM curve** (NOT the general equilibrium point). ย้ำว่าเลือกจุดไหนก็ได้ที่อยู่บนเส้น IS หรือ LM ที่ไม่ใช่จุดตัดตรงกลางของสองกราฟ

Use the diagram that you draw to briefly explain how the two markets at **your current point** will adjust towards the general equilibrium.

Question 3

Assume that the liquidity preference function (real money demand) is given by the $L(Y, i) = L_0 + L_Y Y - L_i i$.

Note that L_0 is **autonomous money demand**, while other terms are the same as in the lecture slides.

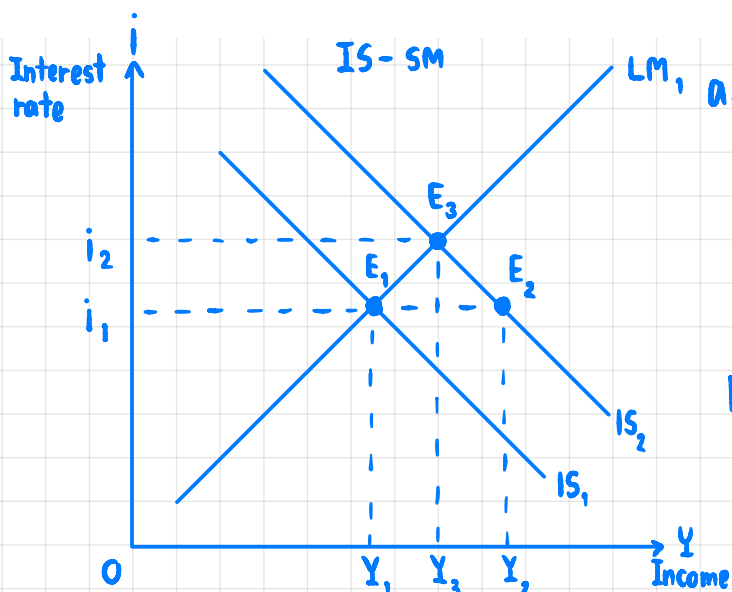

Now suppose that L_0 falls.

- Give ONE reason why this may happen.
- Show and briefly explain the effect of the fall in L_0 on the 4 diagrams (Keynesian Cross, Money Market, IS-LM, AD).

Question 1

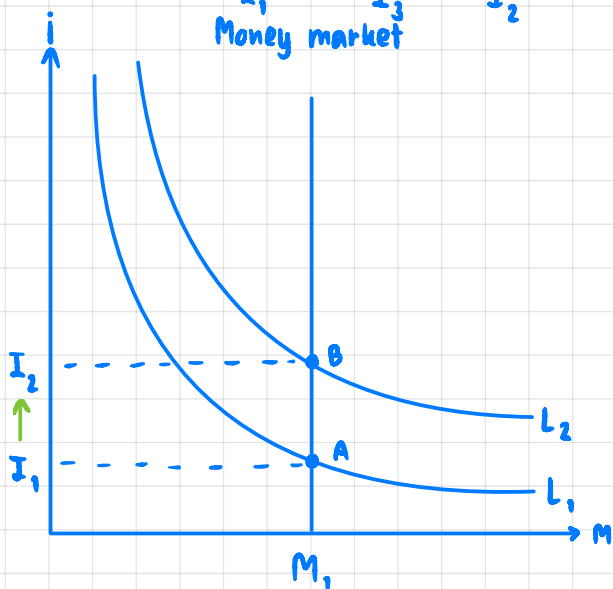

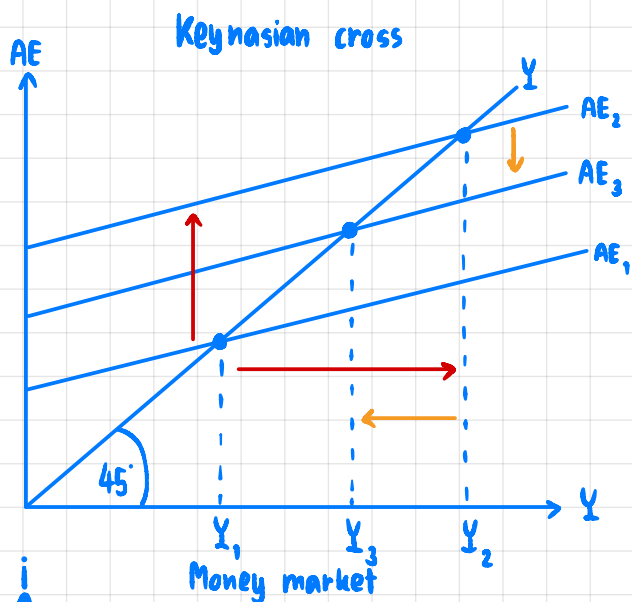

Draw 3 diagrams (Keynesian Cross, Money Market, IS-LM) to **show and briefly explain** the followings:

- The crowding-out effect when the government increases its spending
- Another policy that can be used to avoid the crowding-out effect

a.) The crowding-out effect having an influence on increasing public sector spending, which leads to government borrowing domestic fund to offsetting budget deficit, causing supply of loanable fund to decrease and interest rate to rise, making number of investment to fall. #

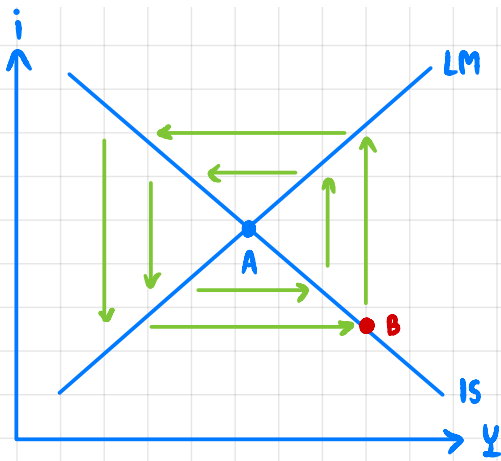

b.) To avoid the crowding-out effect, the government can apply an expansionary fiscal policy stance and it will increase spending to boost in economy. This leads to an increase in interest rates. #

Question 2

Draw the IS-LM diagram. Pick ANY point on either the IS curve or the LM curve (NOT the general equilibrium point). ย้ำว่าเลือกจุดไหนก็ได้ที่อยู่บนเส้น IS หรือ LM ที่ไม่ใช่จุดตัดตรงกลางของสองกราฟ

Use the diagram that you draw to briefly explain how the two markets at your current point will adjust towards the general equilibrium.

IS - LM diagram

From the graph, point B is on the IS curve, which isn't the equilibrium. To adjust point B to the equilibrium, banks should rise interest rate which will lower the investment rate. This will make a endlessly cycle between 2 markets, which is called CoB - web model. #

Question 3

Assume that the liquidity preference function (real money demand) is given by the $L(Y, i) = L_0 + L_Y Y - L_i i$.

Note that L_0 is **autonomous money demand**, while other terms are the same as in the lecture slides.

Now suppose that L_0 falls.

- Give ONE reason why this may happen.
- Show and briefly explain the effect of the fall in L_0 on the 4 diagrams (Keynesian Cross, Money Market, IS-LM, AD).

a.) L_0 will fall when price is decreasing, so people wouldn't want to hold much cash on hand because the cost of holding cash is comparatively expensive than putting it in the bank. #
