

## First Draft (Group 7 - Transportation in Vietnam)

### Overview

- How Vietnam develop the transportation sector
- The effect of transportation sector to Vietnam economy
- Transportation system / infrastructure current status and its development planning
- Ho Chi Minh and Hanoi
- Adding ring roads and radial roads in many directions
- The size of the urban road network is too small compared to other countries and also intersections are not intentionally supported for personal transportation
- The development of transport infrastructure does not catch up with transport means
- Public transportation did not match with the people demand
- Still difficulties in transportation outside the city

need details and elaborate

provide a

### Problems and challenges facing:

- Transport Infrastructure and Pollution Problem
- Motorcycles are the Leading Cause of Traffic Accident
- Traffic Congestion from the Failure of Public Transportation
- The Policies Do Not Target to Control the Number of Personal Vehicles

Elaborate further, and provide data / graphs / charts as needed to support the writing.

### Current Policies:

- Land Management and Taxes on Pollutant
- Mandatory for motorcyclists to wear helmets and making them fashionable and practical
- Development Plans and Policies to Improve Public Transportation
- Generating capital for transportation infrastructure development

### Stakeholders ?

### The outcome of the policies for urban transport development:

- The Addition of Traffic Infrastructures and CO<sub>2</sub> Reduction
- the number of serious traffic accidents and injuries reduces by nearly half
- Helmets becomes increasingly popular among teenager and adult users
- The Improvement of the Public Transportation
- The Result from the Modification Funding Strategies and Lawsuit

### Lesson Learned

### Conclusion

The ideal topic is a book one. However the group needs to put these together and elaborate the ideas into a sound work. There still needs to be a book.
