

HW#5 Due September 22, 2020

Mankiw Page 107

3. Suppose the price elasticity of demand for heating oil is 0.2 in the short run and 0.7 in the long run.
- If the price of heating oil rises from \$1.80 to \$2.20 per gallon, what happens to the quantity of heating oil demanded in the short run? In the long run? (Use the midpoint method in your calculations.)
 - Why might this elasticity depend on the time horizon?

7. Suppose that your demand schedule for pizza is as follows:

Price	Quantity Demanded (income = \$20,000)	Quantity Demanded (income = \$24,000)
\$8	40 pizzas	50 pizzas
10	32	45
12	24	30
14	16	20
16	8	12

- Use the midpoint method to calculate your price elasticity of demand as the price of pizza increases from \$8 to \$10 if (i) your income is \$20,000 and (ii) your income is \$24,000.
- Calculate your income elasticity of demand as your income increases from \$20,000 to \$24,000 if (i) the price is \$12 and (ii) the price is \$16.

$$3. a.1 \eta_0 = \frac{\% \Delta Q_0}{\% \Delta P}$$

$$0.2 = \frac{\% \Delta Q_0}{\frac{22-14}{14} \times 100} \rightarrow 0.2 = \frac{\% \Delta Q_0}{22}$$

$$\% \Delta Q_0 \text{ (short)} = 4.4 \neq$$

$$0.4 \times 22 = 1.54 \text{ (long)}$$

b. ? short run
 can not change
 enough time long
 run can change
 everything.

$$b.7 \eta_I = \frac{\% \Delta Q_0}{\% \Delta I}$$

$$\frac{\frac{30-24}{24} \times 100}{\frac{20,000-20,000}{20,000} \times 100} = \frac{25}{20} = 1.25 \neq$$

$$\eta_I = \frac{\% \Delta Q_0}{\% \Delta I}$$

$$= \frac{\frac{12-6}{6} \times 100}{\frac{20,000-20,000}{20,000} \times 100} = \frac{50}{20} = 2.5 \neq$$

$$a.7 \eta_0 = \frac{\% \Delta Q_0}{\% \Delta P} \text{ At } 20,000$$

$$\text{Sol } \eta_0 = \frac{(Q - Q_0) / (Q + Q_0)}{(P_1 - P_0) / (P_1 + P_0)}$$

$$\eta_0 = \frac{1}{\text{slope}} \cdot \frac{(P_1 + P_0)}{(Q + Q_0)}$$

$$\eta_0 = \frac{1}{-4} \cdot \frac{(15 + 7)}{(2 + 10)} = -9.16$$

$$= 1 \neq$$

$$\text{At } 20,000 \quad \eta_0 = \frac{1}{\text{slope}} \cdot \frac{(P_1 + P_0)}{(Q + Q_0)}$$

$$= \frac{1}{-2} \cdot \frac{15}{15} \quad \eta_0 = \frac{1}{2} \cdot \frac{15}{15} = -0.97 \neq$$
