

Quiz 2

(5 points)

Time: 22 September 2021 at 15:00-15:30 (30 minutes)

There are 2 questions. You need to answer all two questions. Please **submit** your answers in a PDF file with a file name “**Quiz2_StudentID_FirstName Surname**” via BE Moodle class before **15:40**.

Write a paragraph to answer two questions below:

Question 1: What are the problems in water resource management? (2.5 points)

Question 2: What could be a source of inefficient allocation of land? (2.5 points)

Q1)

1. Climate change, population increase, and the need to safeguard the environment are all putting strain on water resources.
2. water resource management, we face a complex laws and regulations landscape.
3. drought resilience are important considerations in water resource planning. However, we are increasingly witnessing the need to address broader resilience in response to variations in peak demand caused by hot weather.
4. Water resource planning and regional interaction are becoming increasingly complex.

Q2

1. Poverty and agricultural productivity

The agricultural zone is critical for understanding low profitability per capita in poor countries. The majority of people work in agriculture in poor countries.

2. vast majority of cultivated land is not marketed either formally or informally. Typically, land ownership resides either with the state or with the commune

3. Land use planning and development ,Gains in agricultural productivity resulting from efficient factor allocation are only the start of a far-reaching development change.
