

Summary of “How a China-Built Dam Destroyed an Ecosystem and Livelihoods”

China is chosen to build enormous hydropower dams along the River Mekong to generate electricity. Everyone who lives along the stream and the individuals who rely upon its water are affected and gazing at endurance. Mekong river is the main river of South East Asia , so because of the Dam, the sources of water are blocked leading to many effects in countries in Southeast Asia .For instance , Thailand faces a genuine dry season that the military must be brought in to assist with peopling who were influenced , and In Cambodia, fisheries and rice development have been influenced as hydroelectric dams caused a decrease in the quantity of marine populations and the nutrition of the soil.

Last but not least, the worst case is in 2019 the water level in Mekong River had dropped to its most reduced level which caused a genuine effect on fish supply, crop development and generally speaking wellbeing of the environment around the stream.

In conclusion, Birgit Schwarz speaks with Human Rights Watch’s Asia Backing Executive John Sifton almost the destroying impact the dam has had on people’s lives, the Cambodian government’s thought processes for building it, and the require for Beijing to superior ensure the rights of those influenced by its enormous BRI framework projects.
