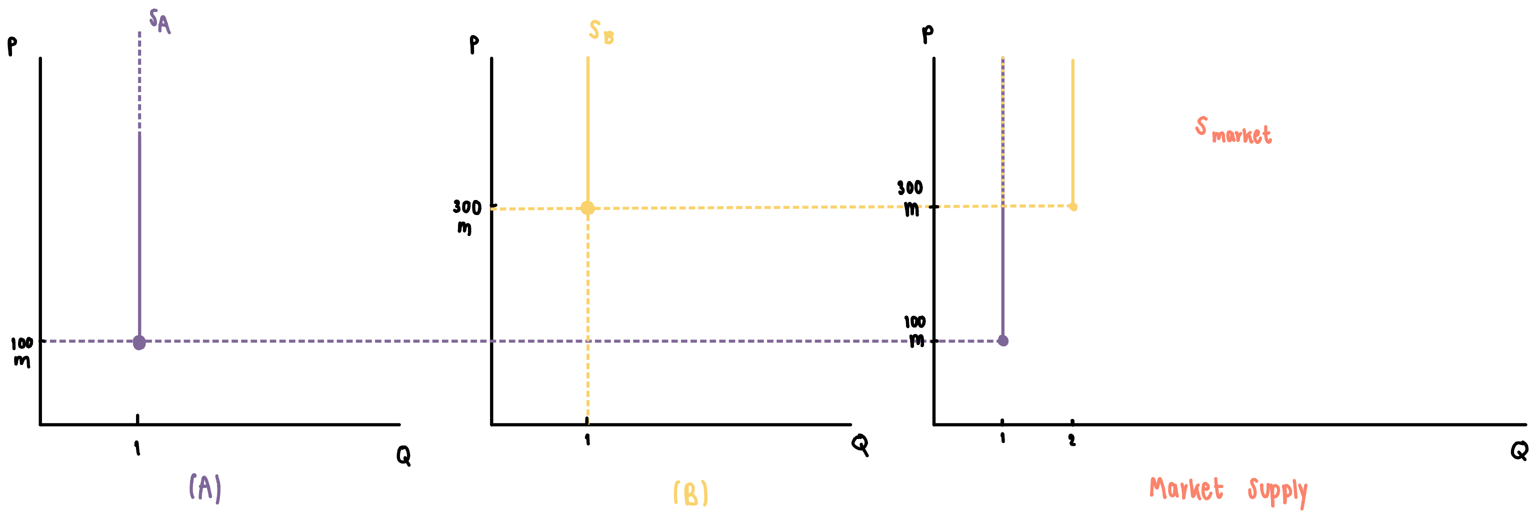
# homework

- Find Market Supply of Kidneys



- How Demand & supply increase in Extreme cases.

Firstly, both demand and supply have minimum and maximum prices for their "willing and able" to buy and sell. the market set up $P_0$ as a equilibrium price that both buyer & seller are willing and able to trade.

- The increasing of demand : could happen when the selling price is dropped below $P_0$. Mostly, People want to buy more when they think it's cheaper than before.
- The increasing of supply : could happen when the seller are able to decrease the cost such as inventing of new technology that help producing more products
