

Essay 1 ; 22nd July,2019

It this class, we have a guest whose talk about CLMVT strategy. He informed a lot about the figure term. He also talk about the CLMVT economic structure. (CLMVT=Cambodia, Lao PDR, Myanmar, Vietnam, Thailand)

The growth rate of CLMVT is difficult to have bench mark with the world now and in 2021 projection is very high. The CLMVT structure growing from agriculture and manufacturing in the main factors but service also. The population of CLMVT is around 240.81 millions people which reflects labor force and domestic market. When we talk about region, Thailand have Buddhism for national region. On the other hands, Indonesia is the largest muslim population in the world.

CLMVT have high percentage of labor force. The main export is mobile (Vietnam) , circuit , computer part , car , etc and main import is gas gold and also car. There are many foreign investors come in CLMVT especially Vietnam and Thailand which the main investors in Thailand come from Japan in which make Korean not invest a lot in Thailand and go to invest in Vietnam. The target of CLMVT also be the main part which develop CLMVT. The main thing that i like the most is no employment which nor more low skill worker which can improve for sure. They also adjust to industry 4.0 backbone which also improve countries and comfortable for users but they have to focus on SDG.

Thailand have strategies which make us to be the center of trading and stable. The economic policy have 20 years strategy length which include Thailand 4.0 and Thailand plus one. Thailand can improve better than other countries in CLMVT countries in the future.

From my opinion, nowadays, the ASEAN and CLMVT still not compare with Euro but in the future if we develop and improve skill of worker and corporate in the good way, we can improve better than Euro but we have to spend much time in which i think more than 30-40 years.

Essay 2 ; 23rd July,2019

On this day, they talk about Myanmar that starting with get to know Myanmar to the development and theoretical framework on democratization.

In the past, Myanmar is British colony which British people try to damage environment and send back to their country. The Myanmar is located in the west of Thailand, 87.9% of Myanmar are Buddhist. The language of Myanmar is different from Thailand in which have 33 consonants and 12 vowels. Myanmar have 7 regions and 7 states. The president of Myanmar elected by the parliament from three proposed vice presidents and also have five years term.

The growth rate of Myanmar is not stable each year but in the last ten years, the trend of Myanmar growth rate are better than before. The gas export is also be the important factor of them. There are some graph provide in the powerpoint which in the page 40 tell us about human development indicator in which the trend of Myanmar are increasing but i am not sure about all of the population is better for real or not. Also the tourist industry in Myanmar are increase in 2014 obviously (page 43). Myanmar have many interesting place including Shwedagon or some island in Myanmar. Myanmar can connect with China which they plan to create railway and if they can construction , the economic in Myanmar will better.

We can see from overall of Myanmar that this country still develop and the trend is better ever year. It can be opportunity of the new investors but Myanmar still have condition about the political of the country. The political or election can be affect investor same as Thailand in which when there are election, the price of stock decrease a lot and still not increase now.

In conclusion, in this class they do not talk much for Myanmar investor or economic but they talk about the overall of the country or the improvement of country that the investor have to use this information to adjust in investment.

Essay 3 ; 25th July,2019

The integration and border trade is the one in which we learn from the class. We have a guest from bank of Thailand. There are 5 areas of ASEAN integration.

There are goods, services, investment, labor, and capital. As we went to cross-border of Thai-Lao PDR and Lao PDR-Vietnam from the trip, we have a chance to see the method of cross each country. The cross-border trade system also important in Lao PDR since they are a land lock country which cannot export or import by water shipping.

In the afternoon class, we learn about China. They talk about GDP growth rate and population. The China is the big competitor with US so they have to improve a lot of their country and make them better every years. We can said that the development of economic in China is success. There are many brand of China in which racing with US brand , for example, Apple vs Huawei or others. The China , nowadays, have technology improvement a lot. They can crate cashless society almost successful if comparing with Thailand, Thailand just try to create this society as we can see from Fintech event that we went in Bank Of Thailand. In other ways, China also have the bad ways including the government try to protect the news from other and use their website for their students. I have told about the high-speed railway in many essay which China already done in their country and try to create to ASEAN to take advantages from others. China try to be the leader of the world so they have the word "China is everywhere" in the slide which including Laos, Myanmar, Vietnam, and Cambodia.

In my opinion, in the future, China will be the leader of the world in which can beat US since they are very good in management but if they want to be the leader, they have not to limitation of the Chinese people (the people who live in China) because if they do not know about the real news of them, they cannot adjust the business and do some business not efficient.

Essay 4 ; 26th July,2019

Urbanization is the main topic of our final group work which use this information a lot. In this class , guest talk about urbanization in CLMV which not inform a lot for us.

They refer about the Mekong river which pass through Cambodia, Lao PDR, Myanmar, Thailand, Vietnam, and China. In the past, people willing to live near the river and use the river a lot. They also talk about the Socioeconomic Indicator which is HDI rank, Population, Area, GNI per capa, Urban population. They talk into each country but from the guest talking, i cannot write much the essay so i will talk about my final project.

My project is about Urbanization: Characteristics and Trends in Vietnam. We also use the indicators which divided into social indicator and economic indicator. In social indicator, we use poverty,education,and health. We think that these three indicators are important because poverty is about the living of people which is important of the evaluation of every countries. Eduction also be the big factor since people who have education will have more chance to work. However, everyone have different chance to study. Health is very important for everyone , when you have more money , you will have more health system.

We use Microsoft Excel to be the main part of our work which can improve our work easier and we will analyze the information. We use correlation to improve our data. We also you literature review to support the data in which we gain.

In the afternoon class, i have to present about the improve of Ho Chi Min city which we never went there. There are many problem which is Rapid population growth (migration, theft), Infrastructure (pedestrian, transport, minimal good condition road, traffic jams),Pollution (air and water pollution),Uneven development among HCMC region and we talk about how to solve the problem.
