

The Resilience of The Thai Economy: 1991-2005

Bhanupong

Lecture 4

Course Syllabus

Lecture 4: Resilience of the Thai economy: 1991-2005

There appears to be some structural mechanisms that would lessen the impact of economic crisis, whether shocks are internal or external. It is impossible to rule out various future shocks such as oil price hikes, realignments of major currency values, or crisis contagion. Is the Thai economy resilient enough to regain its pre-shock growth path in a V-shaped recovery in 2019?

Key words

- Growth with Price Stability
- Human capital
- Strengthening Fiscal Position
- Recession and recovery
- Irrational Exuberance
- Fear of baht appreciation
- Export-oriented industries and FDI
- World business cycle

Human capital investment

	Public Expenditure on education (%GNP) 1989	Secondary school enrolment (1988-89)
China	2.4	44
India	3.2	43
Indonesia	0.9	47
Korea	3.6	87
Malaysia	5.6	87
Thailand	3.2	28

Theodore Schultz: Human capital and economic development

- Schultz first wrote about the connections between education and productivity.
- At the time, other economists were having trouble explaining how the economies of such nations as Germany and Japan grew so quickly after World War II.

The role of human capital in economic development

- Some economists attributed the improvements in those nations and others to "technical change," but Schultz identified **people** as the source of the economic growth.
- Schultz was the first economist to systematize "how investments in education can affect productivity in agriculture as well as the economy as a whole," according to his 1979 Nobel citation.

Theodore Schultz's sage advice: Don't neglect agriculture

- Schultz was often a critic of developing nations' efforts to expand industrialization at the neglect of agriculture development.
- By being able to show that economic growth depended on "human capital," Schultz opened a whole new area of research and paved the way for work by other economists.

V-shaped recovery

Irrational Exuberance

by Robert J. Shiller

- The Stock Market Level in Historical Perspective
- Precipitating factors: The Internet, the baby boom, digital economy, robotics, and other events
- Amplification Mechanisms: Naturally Occurring Ponzi Processes

Irrational Exuberance

- Psychological Factors
(Tulip mania: 1637, bitcoin 2017)
- Herd Behavior and Epidemics
- Attempts to rationalize exuberance
- Efficient markets, Random walks, and Bubbles

Dwindling incentives to save

Conclusions

- Resilience of the Thai economy had been demonstrated after the financial and exchange rate crises in the period 1997-98.
- Realistic exchange rates are the key for successful external imbalance adjustments.
- Fiscal balances and external debts depend on fiscal discipline.

Conclusions

- Capital flows are related to exchange rate movements.
- Asset bubbles are associated with expectations and monetary expansion.
- External influences on the Thai economy increase with higher degree of globalization.

Review Questions

- Has the Thai economy in 2019 become more or less resilient than the period before 2006?
- Is Thailand experiencing a property bubble? If so, explain why. Should the Central Bank prick asset bubbles?
- How far can a country rely on domestic demand stimulus?
