Quiz 2

(5 points)

Time: 22 September 2021 at 15:00-15:30 (30 minutes)

There are 2 questions. You need to answer all two questions. Please **submit** your answers in a PDF file with a file name "**Quiz2_StudentID_FirstName Surname**" via BE Moodle class before **15:40**.

Write a paragraph to answer two questions below:

Question 1: What are the problems in water resource management? (2.5 points)

Question 2: What could be a source of inefficient allocation of land? (2.5 points)

- ① There are a lot of water resource problem to manage.
- First, scarcity of water is a basic problem because in this entire world have only 2.5% of freshwater and it is only 1% of it that people can consume, It is difficult to find more source of water because we have only 2 sources of water such as surface water and ground water. Second, quality or cleanness of water. It still have a lot of country that faces with this problem such as Thailand. A lot of country found that their water are polluted and it impact to limited amount of water.

Moreover, the demand of using water still fastly increase in every year and it may impact to source of water in the future. All of these problem are still solving by VN and others organization.

② For my opinion, I think government failure is one of the cause of inefficient allocation land. Such as lowering transportation cost. Moreover, undervaluing environmet amenities is the source too. Such as non-urbanland have nice view but the landowner didn't count it. So, it may impact to value of the land.
