

1. There are many problems in water resource management. People tend to consume more of water than the International Energy Agency predicts that the global water consume water is about 300 BCM. Moreover, water inadequacy caused by climate change and lack of good infrastructure. Some people can not access to clean water to drinking and consume as healthcare. And bad quality of water also the problem by water pollution.

2. Sources of inefficient land is the underrable land that provide the benefit to other without the payment but the owner can decide to max profit from that land by build the hotel. Other is inconsonant land, the owner land creates the damanges to other surrounding the land. And the insecure property right that the occupier can gain benefit.
