

Quiz 2

(5 points)

Time: 22 September 2021 at 15:00-15:30 (30 minutes)

There are 2 questions. You need to answer all two questions. Please **submit** your answers in a PDF file with a file name “**Quiz2_StudentID_FirstName Surname**” via BE Moodle class before **15:40**.

Write a paragraph to answer two questions below:

Question 1: What are the problems in water resource management? (2.5 points)

Question 2: What could be a source of inefficient allocation of land? (2.5 points)

Question 1: What are the problems in water resource management?

the problems are water scarcity, people don't access to clean water. Quality of water is bad. water scarcity is a lacking of water resource because can't afford a good infrastructure. Accessing to clean water is also the problem because the quality of water is bad which can caused a health problems. And accessing to clean water is also have water stress which we use the under ground water too much and environment can't refill it in time. The main problem that can clearly see is that some people that outside the city don't have a good quality of the water due to lack in infrastructure and bad managing of government.

Question 2: What could be a source of inefficient allocation of land?

It can be many factors that create inefficient allocation of land. It can be caused by market problems, government failure, public sector.

For example from government that allow some people to build the building in the conserved land (using forest land).

For Market problems are lower value of land (not feel greatful for the beautiful land that they own)
