

"How a China-Built Dam Destroyed an Ecosystem and Livelihoods"

Problems

- An environmental resources are reduced. Opportunity costs.
  - ↳ The amount of aquatic animals has reduced because of the effect of the dam.
  - ↳ The flood reduced the land and make the land and forest to be limited. It make people struggle to make a living.
- The compensation did not worth for their actually lost.
  - ↳ People lost their jobs and residence.
- Economic growth but exchange with an environmental problems
  - ↳ Although making the dam can develop the economic in some country, but it will effect the ecosystem and cause a lot of problem in the local people. This will change the life of local people forever.

Cause

All of these problems are cause by the BRI project to spur development and advance Chinese foreign policy interests globally.
