

EE460: Thai financial sector

Bhanupong

Lecture 25

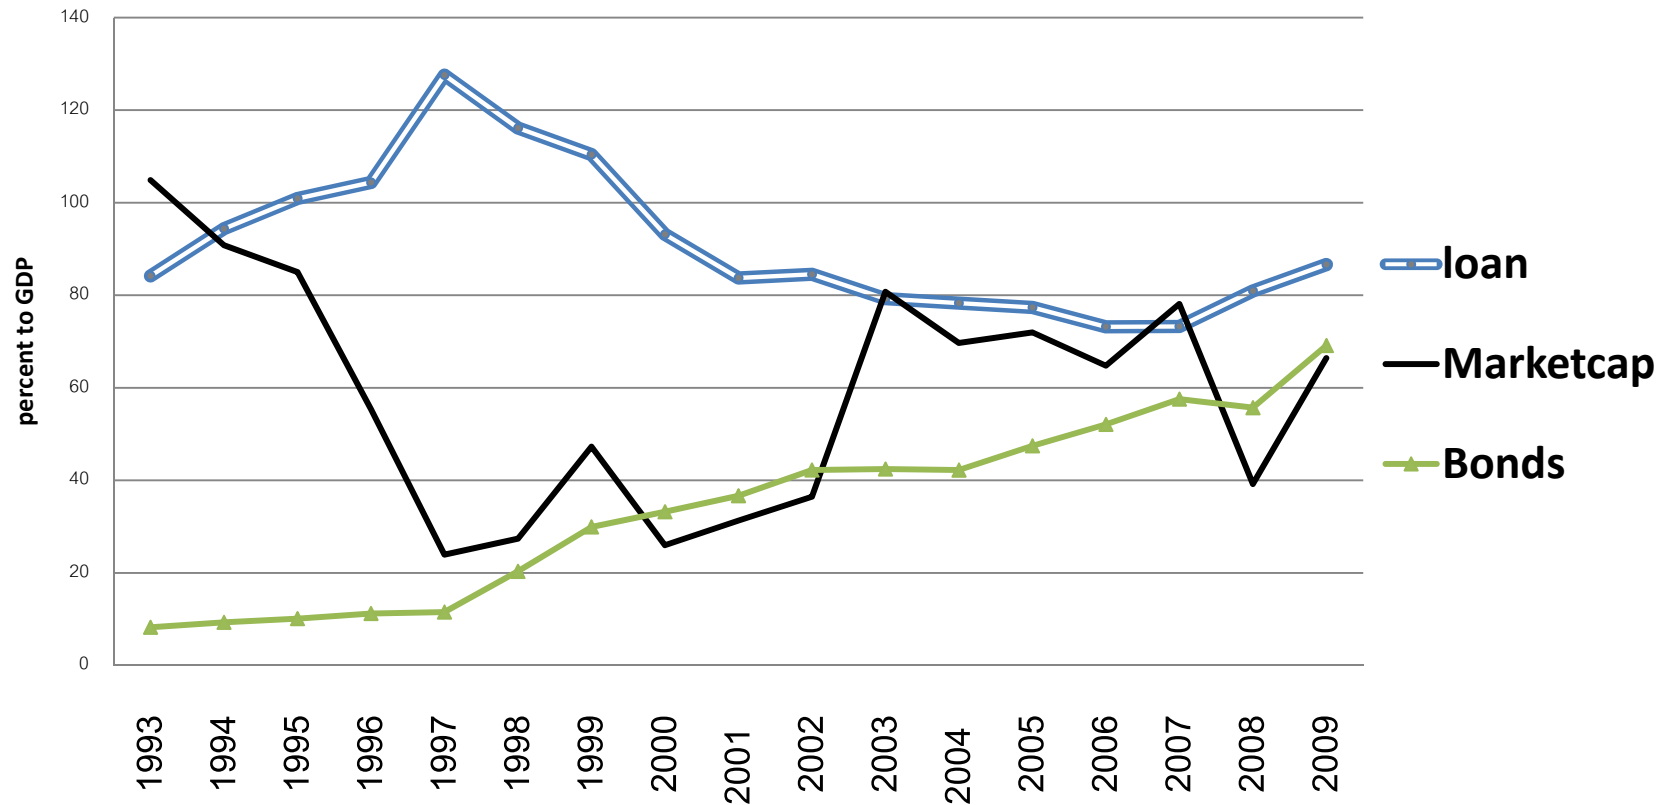

Outline

- Structural change
- Good and bad banks
- S-C-P relationship
- Profitability, efficiency, and solvency
- Bond markets
- Foreign penetration
- GFC and the Thai financial sector

Abstract

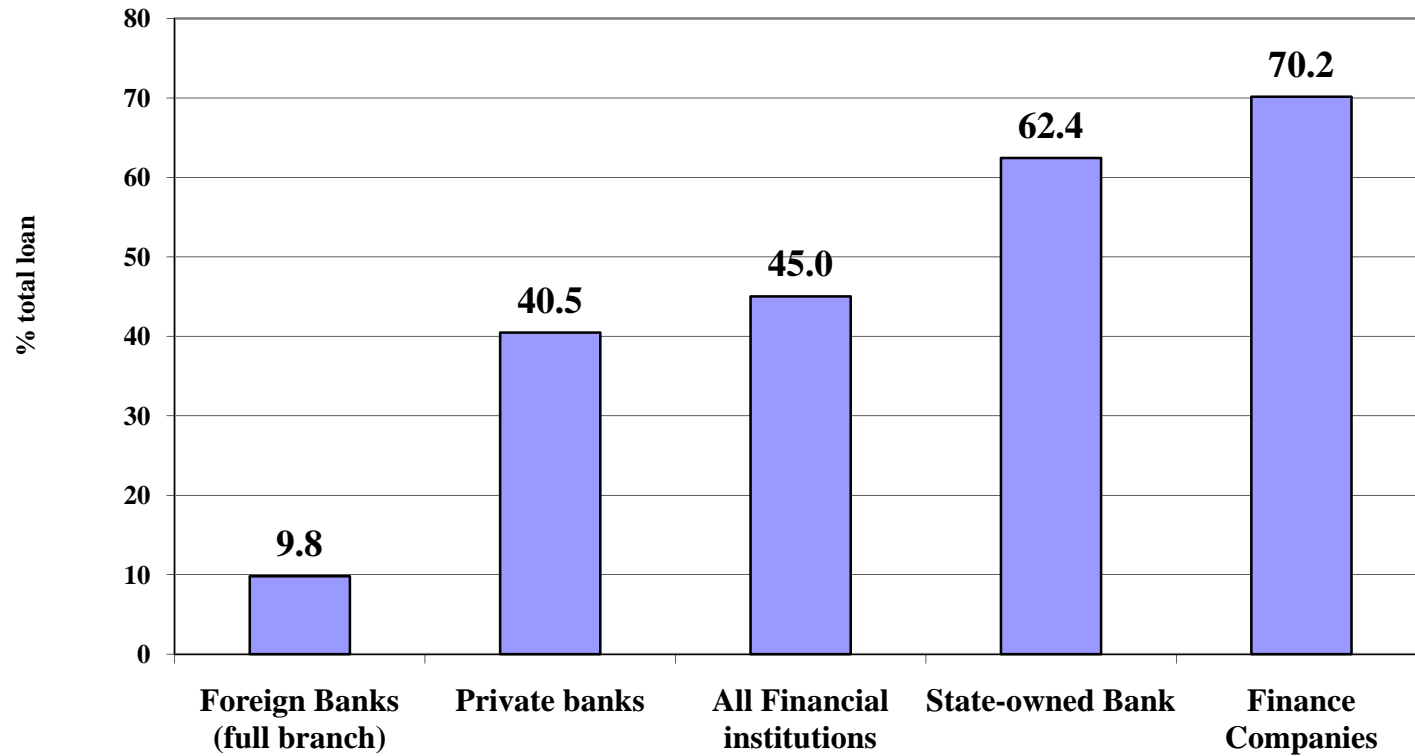

- The Thai economy is vulnerable to external shocks because of its high exposure to trade and capital flows.
- Despite its adverse consequences on the real sector of the Thai economy in 2009, the global financial crisis had little impact on the Thai financial sector.
- The healthy performance and resilience of Thai financial institutions can be attributed to the financial reforms undertaken after the Asian financial crisis and the favorable macroeconomic environment

Structural Change in the financial sector

- The Thai financial sector was vulnerable in the late 1990s.
- The lack of prudential regulations and sufficient loan loss provisions that prevailed before the liberalization of capital account led to huge capital inflows and subsequent financial turmoil.

Non-performing loans in 1998

When good banks become bad banks:

Four stages

- The quality of management is an important difference between sound and unsound banks.
- The better-managed banks succeed in remaining solvent.
- Roots of financial distress can be grouped under three headings: macroeconomic conditions, industrial and financial policy, and debtor and credit behavior.
- Four types of mismanagement commonly occur in the absence of effective regulation and supervision:

1. Technical mismanagement

- Inadequate credit analysis
- Political pressures
- Excessive risk concentration
- Insider lending
- Mismatching assets and liabilities in terms of currencies, interest rates, or maturities

2. Cosmetic management

- Try to hide past and current losses:
- Bankers may keep dividends constant despite poor earnings.
- Retain smaller share of income for provisions against loss, thereby sacrificing capital adequacy.
- Resort to increase net profits on paper (even if more taxes must be paid)
- Classify bad loans as good so as to avoid making provisions.
- Recording income can be advanced and the recording expenditure postponed.

3. Desperate management

When losses are too large to be concealed by accounting gimmicks.

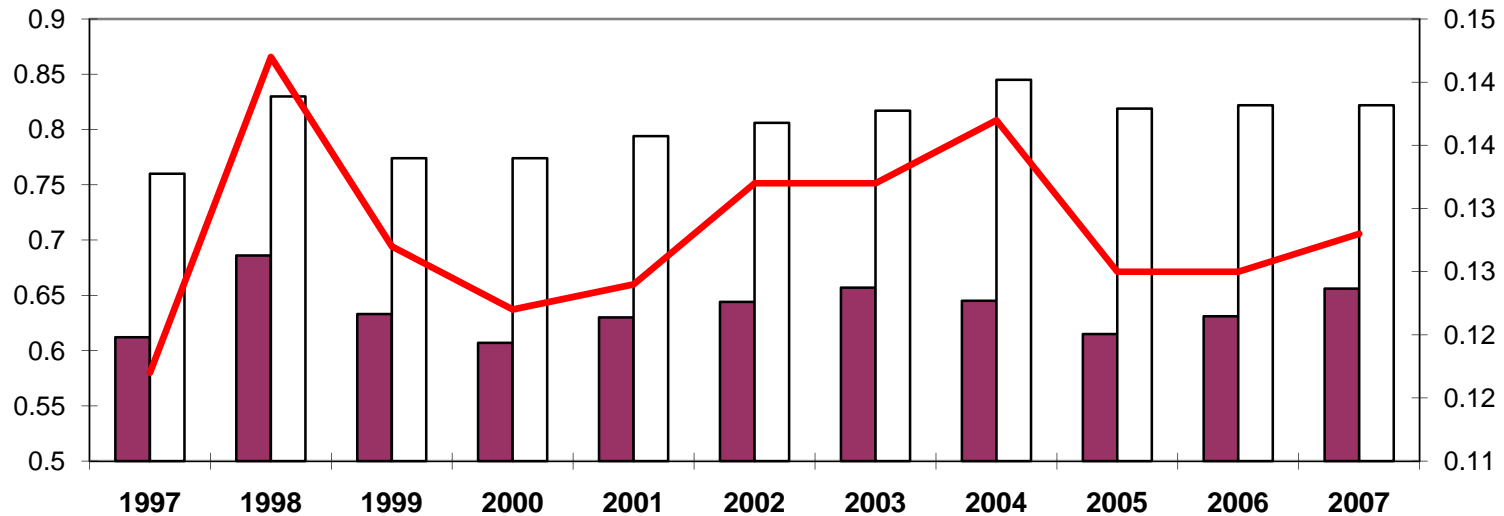

- Lending to risky projects at higher loan rates
- Speculating in stock and real estate markets
- Greater risk may lead to further losses and cash flow problem.
- Offer high deposit rates to attract new deposits to avoid a liquidity crisis.
- The higher cost of funds eventually compounds the problems.

4. Fraud

- Fraudulent behavior sometimes causes initial losses, but once illiquidity appears inevitable, fraud becomes common.
- As the end approaches, bankers grant themselves loans that they are unlikely to repay
- “Swinging ownership” of companies partly owned by banks or bankers.
- If a company is profitable, the bad banker will arrange to buy it from the bank at a low price, if the company is unprofitable, the banker will sell it to the bank at high price.

Market structure

SET-listed firms' interim dividend payout ratio reaches record high

- Published on September 16, 2010

A hundred nineteen firms listed on The Stock Exchange of Thailand (SET) and the Market for Alternative Investment (MAI) will pay Bt90.18 billion as interim dividend, a 23.19 per cent increase from Bt73.20 billion in the same period last year.

- The dividend payout ratio was 47.5 per cent, the highest record in five years. "In the first half, of all listed firms announcing interim dividend payments, 103 were on the SET and 16 were on MAI. The total of 119 was eight more companies than last year.

SET-listed firms' interim dividend payout ratio reaches a record high

- The rise in the number of firms announcing interim dividend payments and ability to payout dividend resulted from the company's growth and a better operating performance, as shown from a 34.03 growth in net profits over the same period last year.
- The top five SET-listed firms paying the highest interim dividends were Shin Corporation Plc, PTT Plc, Advanced Info Service Plc, PTT Exploration and Production, and Siam Cement, accounting for 56.03 of total interim dividends of SET-listed firms.

NPLs by types of financial institutions (% total lending)

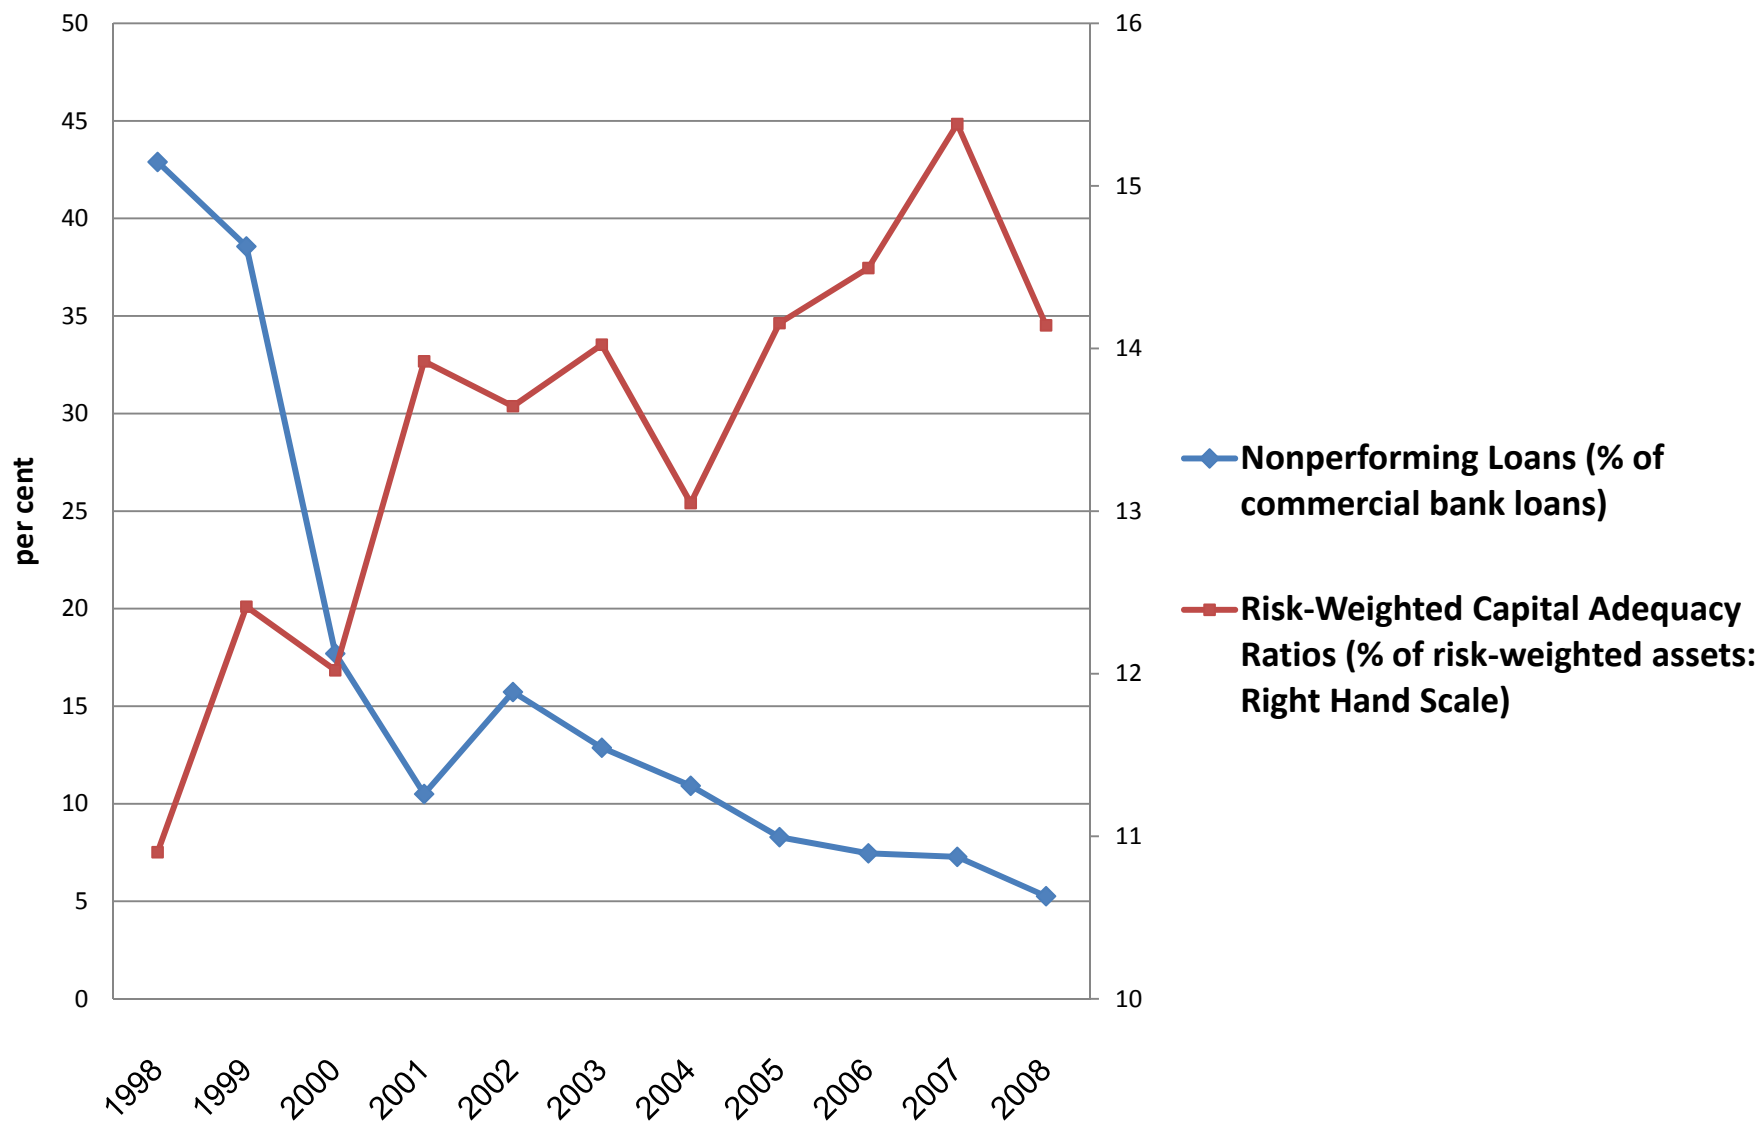

1998 2007

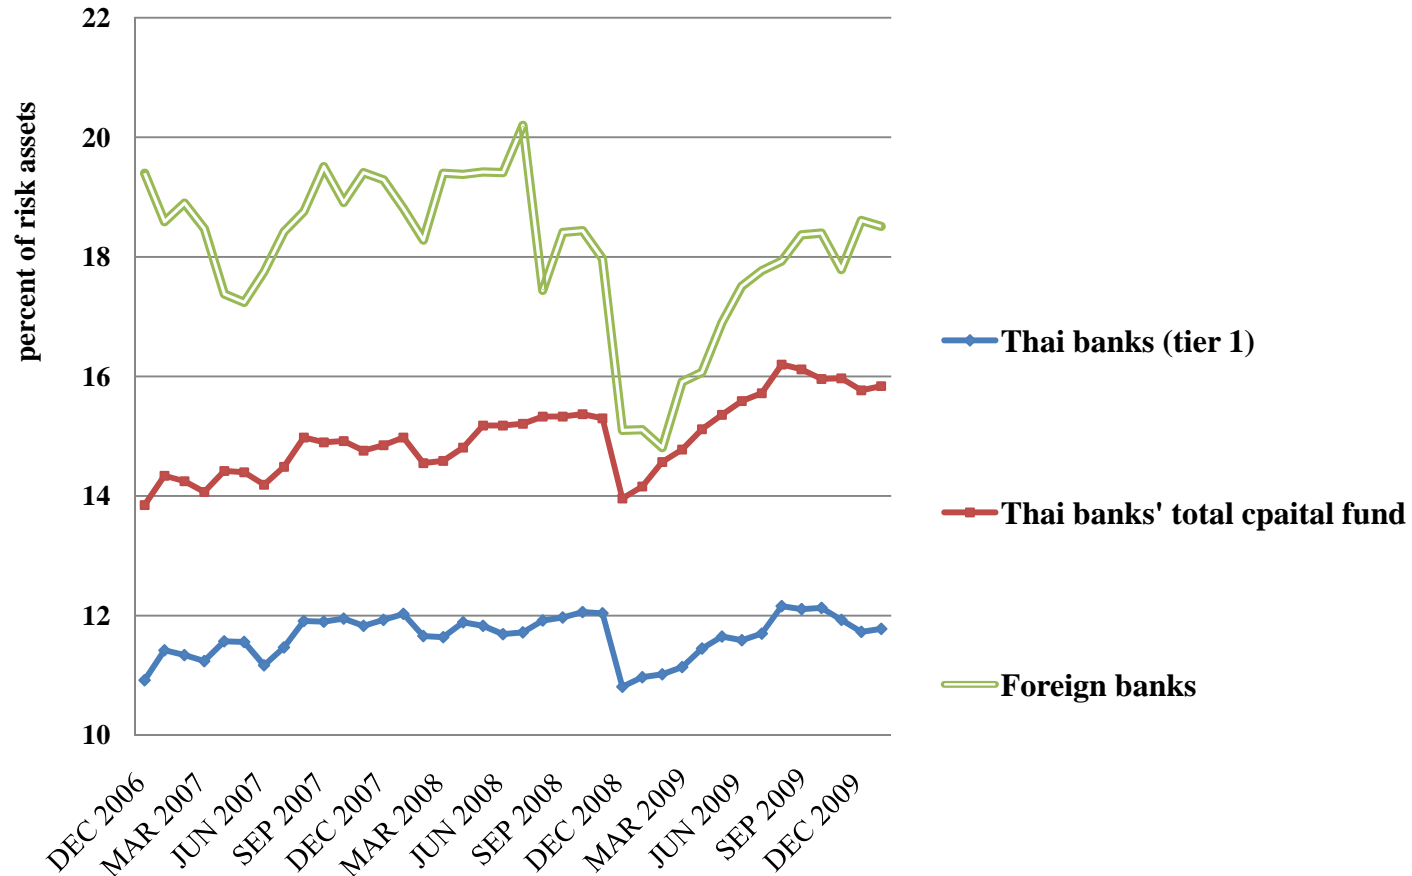

A blessing in disguise

- The Thai financial sector has emerged from the 1998 crisis and become stronger and more resilient, thanks to foreign capital injection, good governance, strengthened financial rules, and economic recovery.

Banks' asset quality and capital adequacy

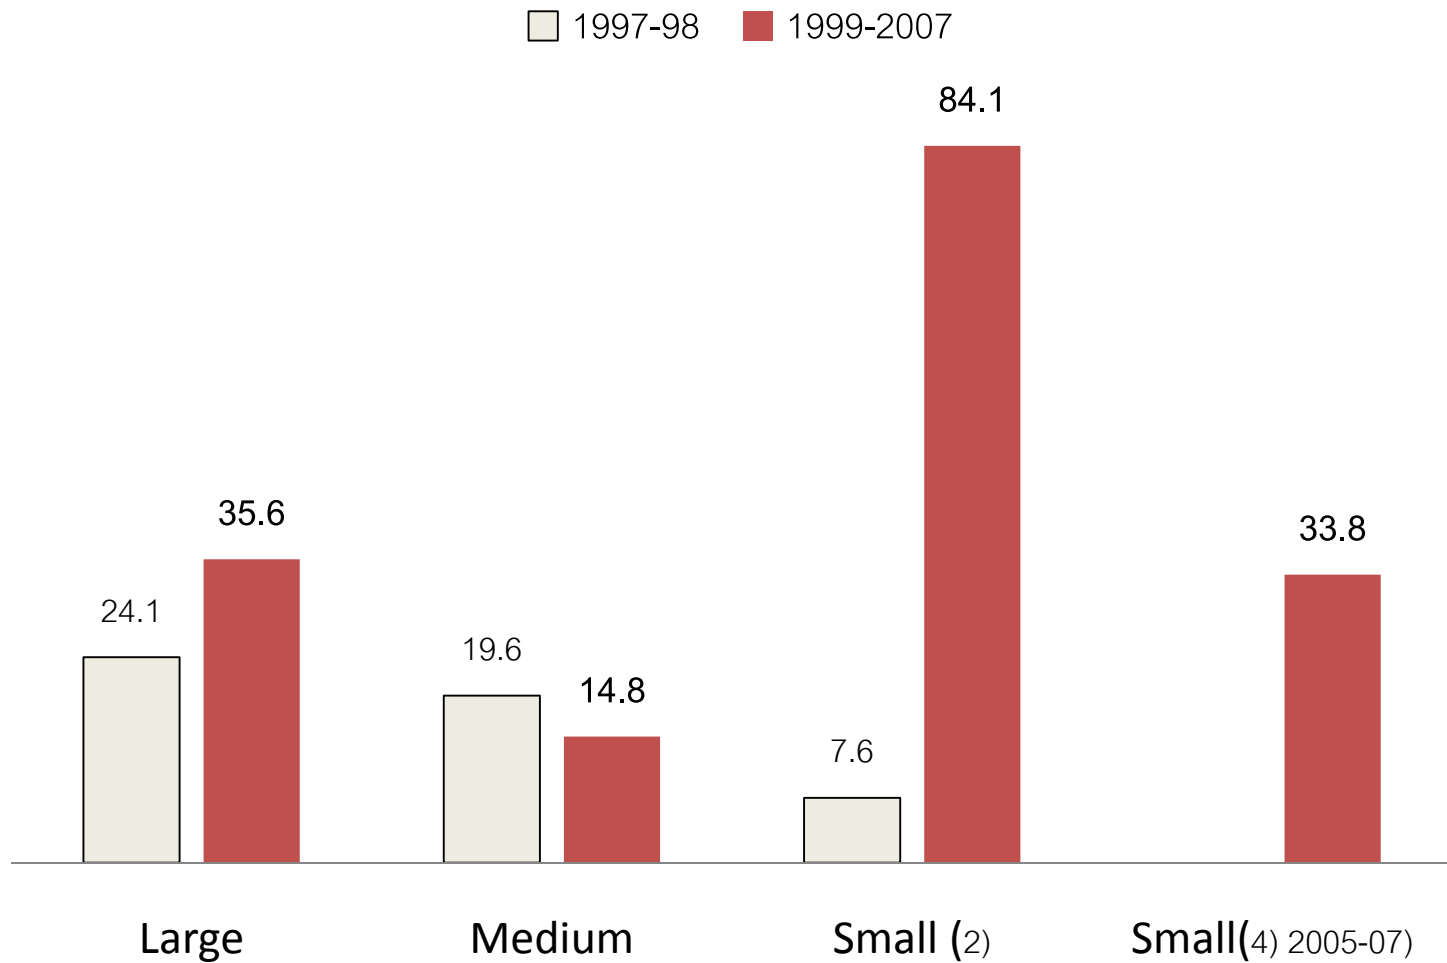

Capital Adequacy during the global financial crisis

Foreign ownership in Thai banks

	1997	2000	2004	2007
Large	22.1	33.4	36.3	38.5
Medium	25.8	9.5	12.2	37.6
Small	6.4	76.7	52.8	55.6

Foreign ownerships in Thai banks

Foreign penetration

- By opening up the financial sector to foreign participation, the financial sector has become more efficient, taking the benefit from competition effect and technology adaptation.
- The large interest margin between lending and deposit rates bodes well for the monopoly rent of commercial banks.
- The transfer of wealth from consumers to banks can be reduced via allowing foreign entry in line with liberalization of the service sectors.

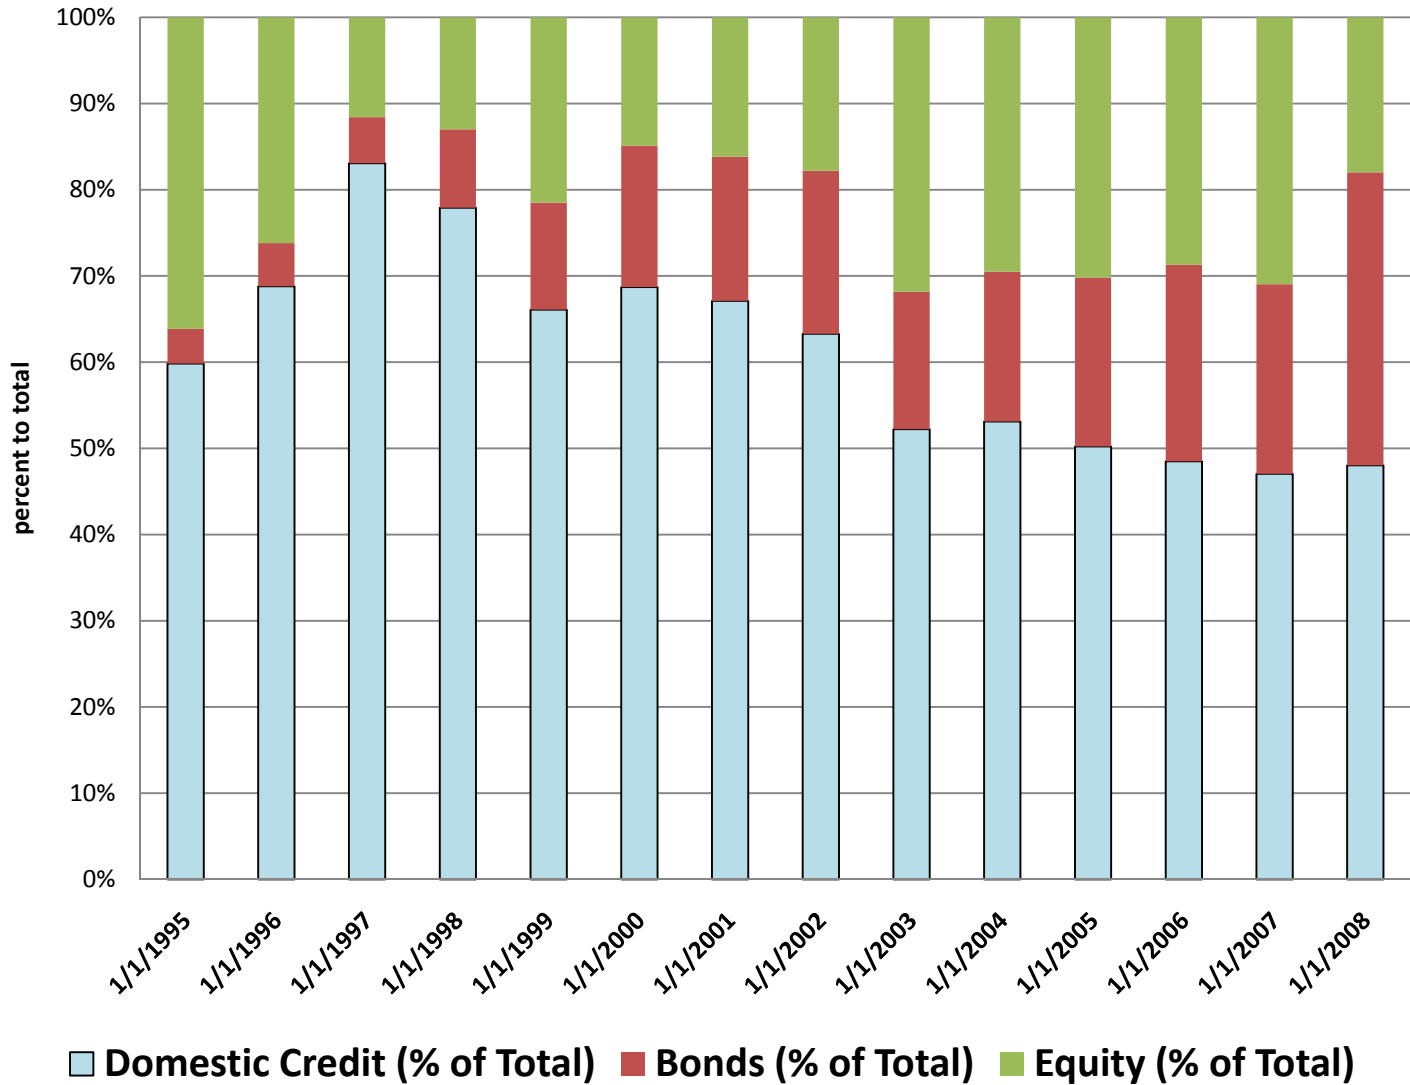

Single-branch rule for foreign banks

- Citi expects to open two new bank branches in Thailand in 2011.
- Thailand will be the third country in Asia with a high-tech Citi Ubiquity branch similar to those in Tokyo and China.
- The global entity will be the first foreign bank in Thailand to take advantage of new rules under the central bank's financial development master plan, which includes a slight easing of the country's long-standing single-branch rule for foreign institutions.

Technology and foreign banks

- Citi recently completed a US\$100-million capital increase to \$800 million, giving it a capital adequacy ratio of 14% and a larger balance-sheet cushion to expand business operations.
- Citi also introduce its new Ubiquity branch concept at its headquarters in the Interchange Building on Asok Road, a futuristic design featuring interactive walls and touch-screens to highlight next-generation banking technology and services.

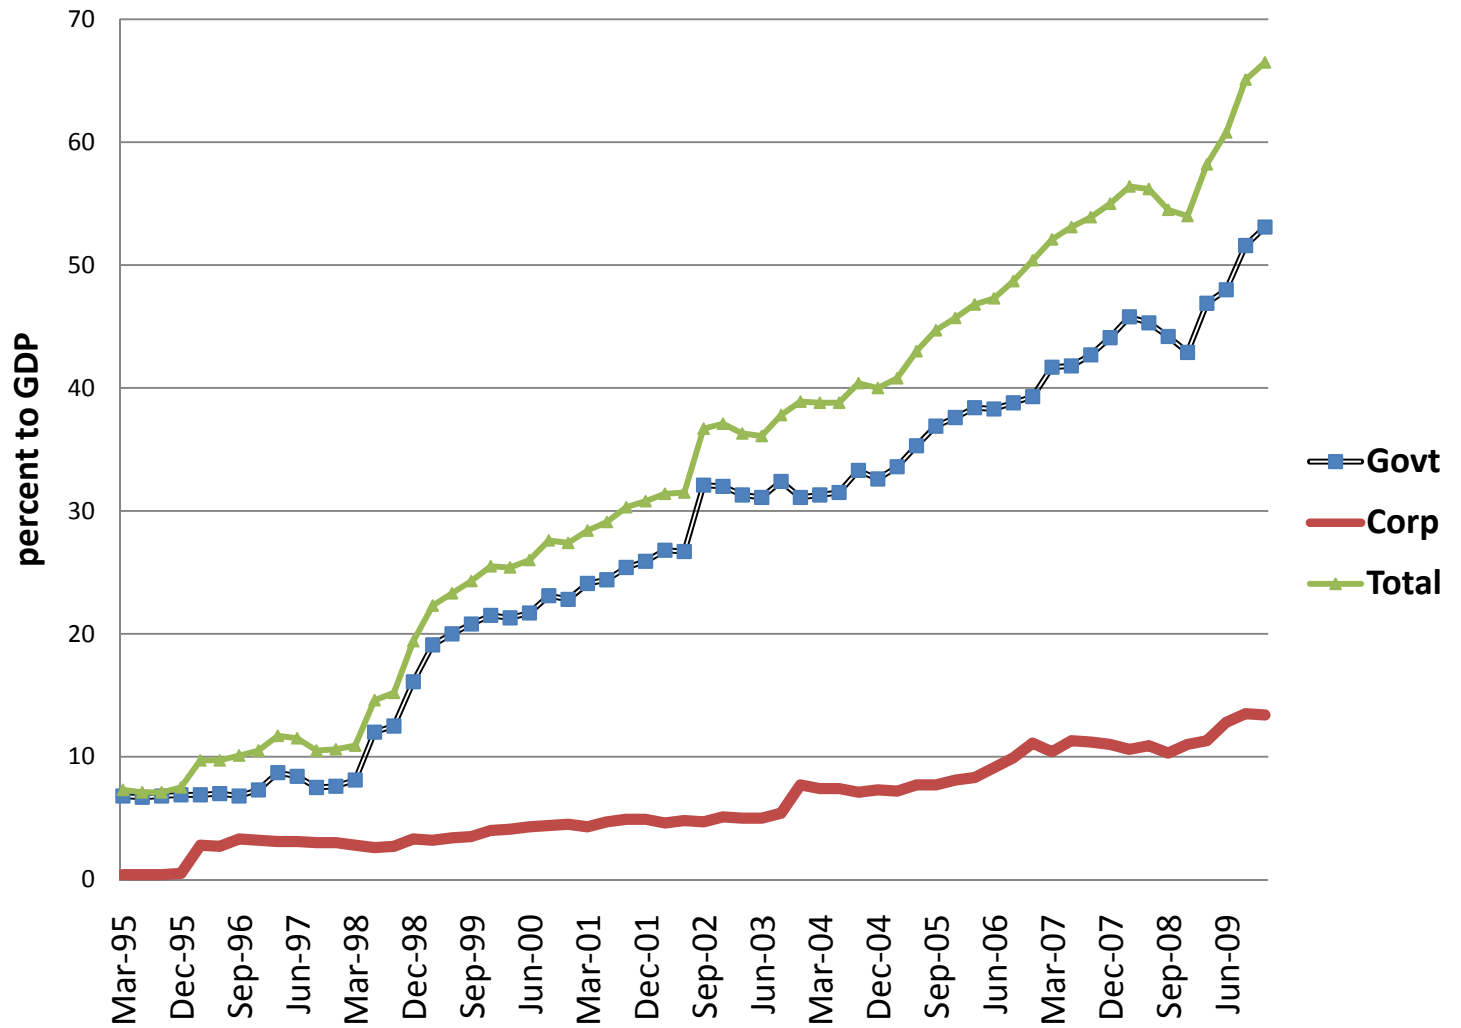

Domestic Financing Profile

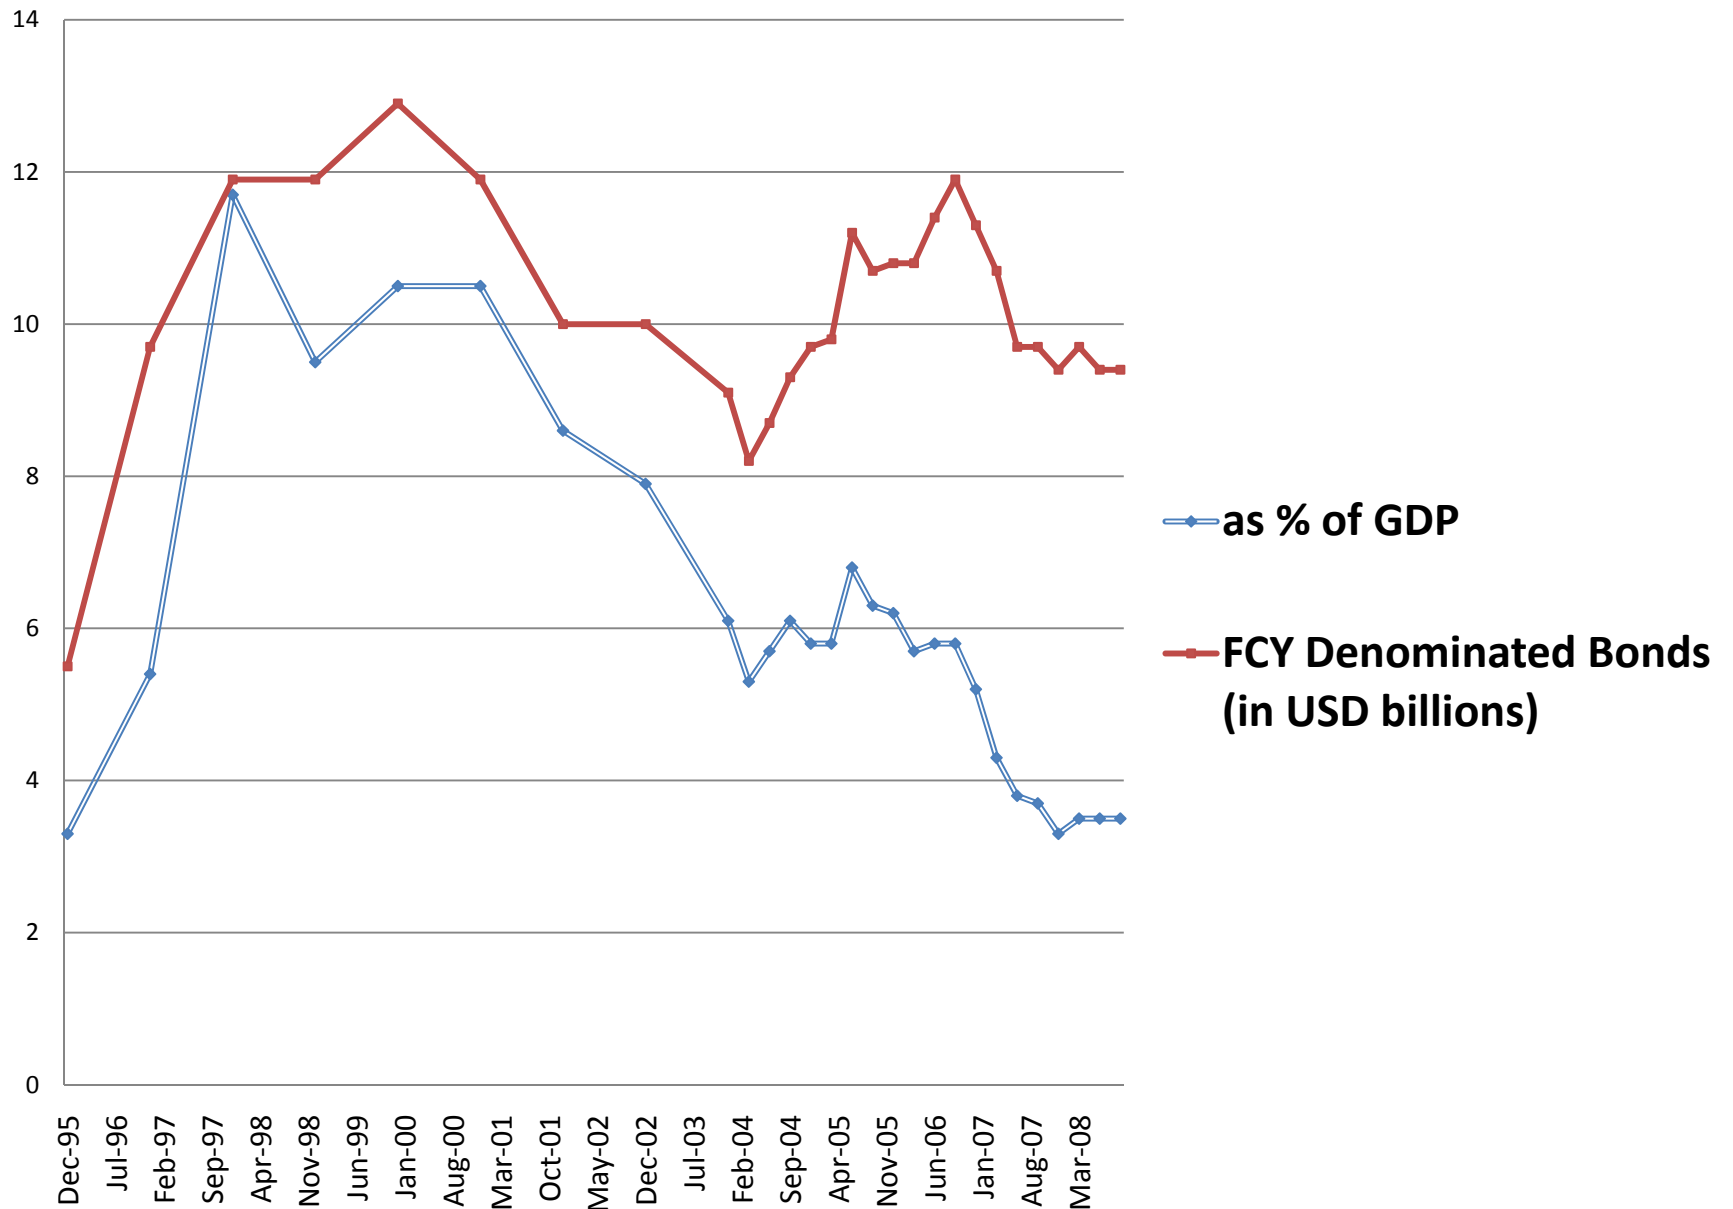

Bond markets

- According to the Securities and Exchange Commission, in the past eight months inflows to the bond market had reached US\$3 billion (Bt92 billion).
- The central bank earlier said that during August 3-9, \$468 million were pumped into the market. In the first half of this year, Thailand's bond market experienced a net outflow of \$44 million, compared to \$407 million at the stock market.
- Foreign investors tend to gain from the differential in bond yields, plus foreign exchange gains. If the investment is shifted to the stock market during a bull run, it could benefit more from capital gains.

Emerging local bonds market

Foreign currency (FCY) denominated bonds

Concluding remarks

- With foreign capital injection, the monetary authorities can maintain system solvency while lessening the burden on financial bailouts.
- Financial restructuring cannot be achieved without allowing foreign participation or acquiring shares of less efficient public-owned financial institutions.

Concluding remarks

- In the future, there would always be some banks that fail because of the vulnerable nature of financial firms; the monetary authorities must distance themselves from the too-big-to-fail syndrome.
- It takes time for depositors to learn to protect themselves and realize that deposit insurance program does not prevent them from any losses caused by future failure of financial institutions.

GFC and Thai banks

- The Thai financial sector was vulnerable and weak in the late 1990s. The lack of prudential regulations and sufficient capital funds made capital control relaxation in the early 1990s premature liberalization.
- The ensuing fast and large capital inflows led to subsequent financial turmoil.

GFC and Thai banks

- The Thai financial sector since then has emerged from the 1998 crisis and become stronger and resilient, thanks to foreign capital injection, good governance, and strengthened financial rules.
- The rapid economic recovery, despite the political turmoil in 2010, provided opportunities for banks to expand their credit and enjoy the benefits from rising interest rates.
- In addition, strong performance of the corporate sector enabled banks to reduce nonperforming loans further.

- The large interest margin between lending and deposit rates bodes well for the monopoly rent of commercial banks.
- The transfer of wealth from consumers to banks can be reduced by allowing foreign entry in line with liberalization of the services sector.

- Financial institutions and their regulators cannot resist the global trend of foreign penetration.
- By opening up the financial sector to foreign participation, the financial sector has become more efficient, benefiting from competition and technology adaptation.
- With foreign capital injection, monetary authorities can maintain system solvency while lessening the burden of financial bailouts.

- Since the 1997 financial crisis, the Thai economy has been closely integrated to the world economy through international trade and capital flows.
- As such, it cannot completely shield itself from external shocks. The global financial crisis during 2007–2009 led to export collapse and output contraction in 2009.
- The debacle of the world's financial institutions and stock market crashes in 2008 had a negative impact on the Thai stock market.

- However, the adverse consequence on the Thai banking sector was minimal. Thai banks were able to make profits during difficult times.
- Most of them did not invest in CDOs nor focus mainly on property lending. The level of NPLs continued to decline, while banks enhanced capital strength and provided sufficient loan-loss provisions.
- The exploitation of economies of scale and scope improved efficiency in their operation.
- All of these factors are the result of financial reforms undertaken after experiencing the financial crisis in 1997.

- Thai banks have been well prepared for the global financial crisis as they have learned a valuable lesson on being conservative and observing stringent prudential rules and regulations.
- It remains to be seen how vulnerable and resilient the Thai banking system is in the face of the Eurozone problems and fears of a US double-dip recession
