

# The Black Death

final paper progress by 6204640616 and 6204641051

The reasons why we choose “The Black death” is because it happened during the time when there was no technology, business, and health services available, therefore, it was the diseases that causes the highest number of death in the world, especially in Europe. Moreover, since there are no technology and services that could be helpful during the spread of the disease, most people believed that Black Death is a God’s punishment, however, the diseases finally ends later in time, therefore, we would like to research and observe how people survived, and since there are the spread of COVID 19 nowadays.

Moreover, the black plague also take parts in the cause of economics change in the late middle ages, some said that it was just the catalyst but it did play role in economic change which is mainly caused by the change in population, since the disease had killed a lot of people, so we think we can applied some of the thought and idea of the black death with our current situation, even though there are many differences between that time and this time.

Our group has came up with the outline for the final paper, the details is the following text.

## **1) Introduction**

- 1.1) Untitled introduction
