

The cause of China-Built Dam Destroyed an Ecosystem and Livelihoods is that people no longer have habitat so they have to move their place. They lose benefit from agricultural such as fish, rice and forest product. People lose main occupation which is fishery and majority of the income. The government have to spend more budget on construction to build the new house for people in the country causing many problems. It also cause the water pollution and air pollution from savage water, combustion and factory emission. Lastly, they have consequent from religion effect and ancestor who used to live in this place. In conclusion, the solution for these problem. The government needs to focus on infrastructure project, road and electricity line. They have to allocate every part of the country to be better.
